nestself

Writing and publishing articles

A tutorial for the content library: write an article, review it, publish it, and read it as an employee.

Milestone 1
Edition of 30 October 2026

Readers
Authors, reviewers, publishers, employees

Screens
From the automated test run, fictional organisations

CHAPTER 1

Before you start

Two web apps, four roles.

An article passes through four people before an employee reads it. Each chapter of this tutorial follows one of them.

AUTHOR	Writes the article in the **admin app** in Serbian, Hungarian and English, then submits each language for review.
REVIEWER	Approves each language, or returns it to the author with a comment.
PUBLISHER	Publishes the approved article to its approved audience, in all four languages at once.
EMPLOYEE	Reads it in the **workspace app**, in their own language, and saves it for later.

Who may do what

Your role comes from a grant (`content_author`, `content_reviewer` or `content_publisher`) for one or more categories. NestSelf staff assign grants in the admin app under Access.

Buttons you may not use are hidden, and the server checks every action again on its own.

About the screenshots

Every screen comes from the automated journey that tests these features (`e2e/content/`), run against a local API with fictional sample organisations and people. The admin app is shown in English; every screen works the same in Serbian and Hungarian.

Buttons and fields are written in bold green, for example **Submit for review**.

Contents

01	Before you start	2
02	Write an article	3
03	Review it	12
04	Publish it	14
05	Read it as an employee	16
06	Quick reference	20

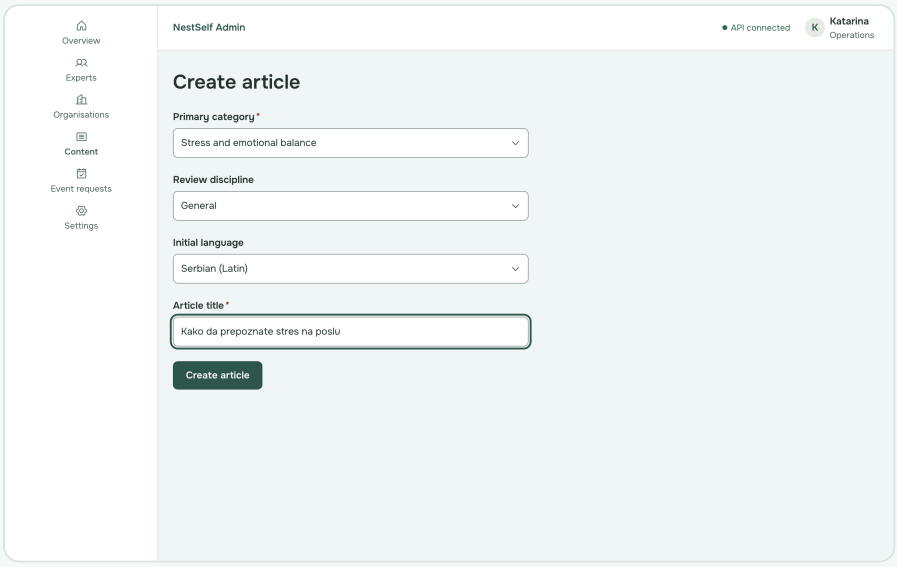

CHAPTER 2

Write an article

Author · admin app

1 Create the article

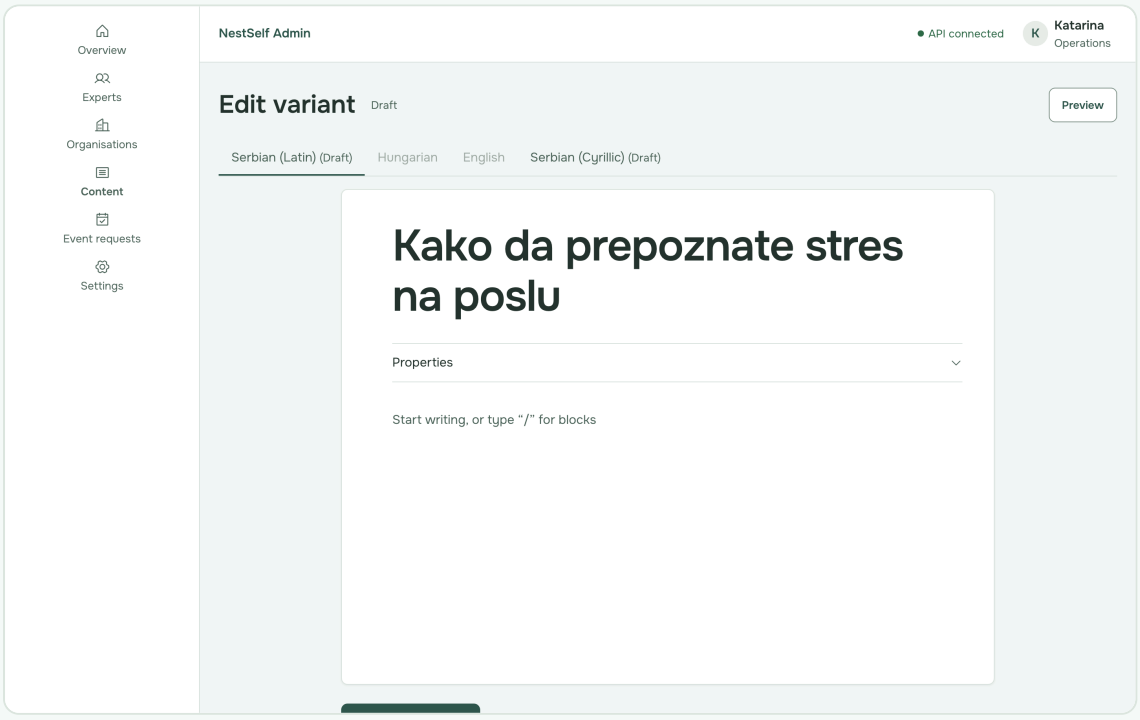

Open **Content** and select **Create resource**. Choose the **Primary category**, the **Review discipline** and the **Initial language** you start in, type the **Article title** and select **Create article**. The editor opens on that language.

The new article form.

2 Start writing

The title sits at the top and the body is one writing area, with no toolbar. **Properties** holds the article's details; leave them for later.

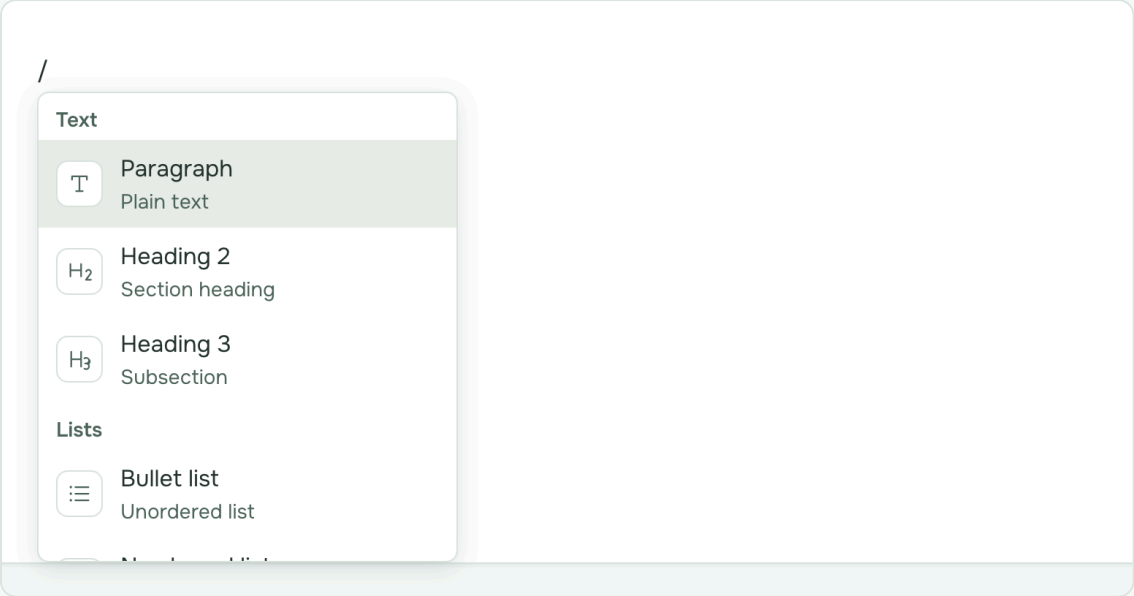

An empty article. The hint in the body says how to add blocks.

3 Add blocks with “/”

Type `/` to open the block menu, keep typing to filter it (`/num` finds **Numbered list**), and press `Enter`. `Esc` closes it and keeps what you typed.

- **Professional note**: a callout; pick Tip, Warning or Disclaimer.
- **Practical step**: a numbered card with a **Step title**.
- **Checklist**: `Enter` adds an item, `Enter` on an empty item ends the list.

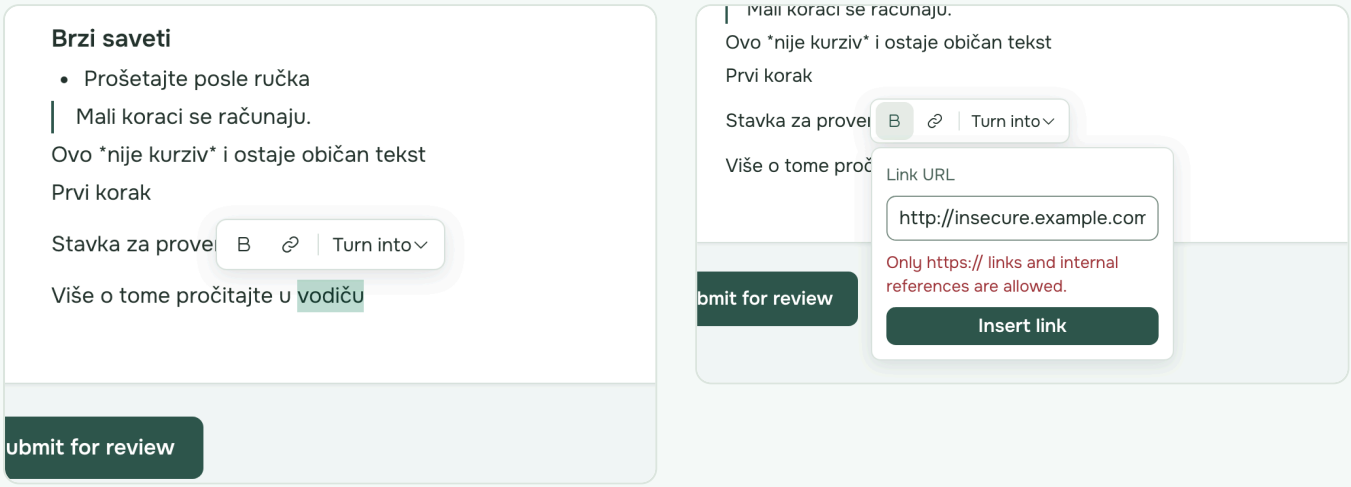

The block menu, grouped into Text, Lists, Blocks and Media.

> **Faster: type the shortcut**
> At the start of a line, `##` and a space make a heading, `###` a subheading, `-` a bulleted list, `1.` a numbered list, `>` a quote and `[]` a checklist.

4 Format a selection

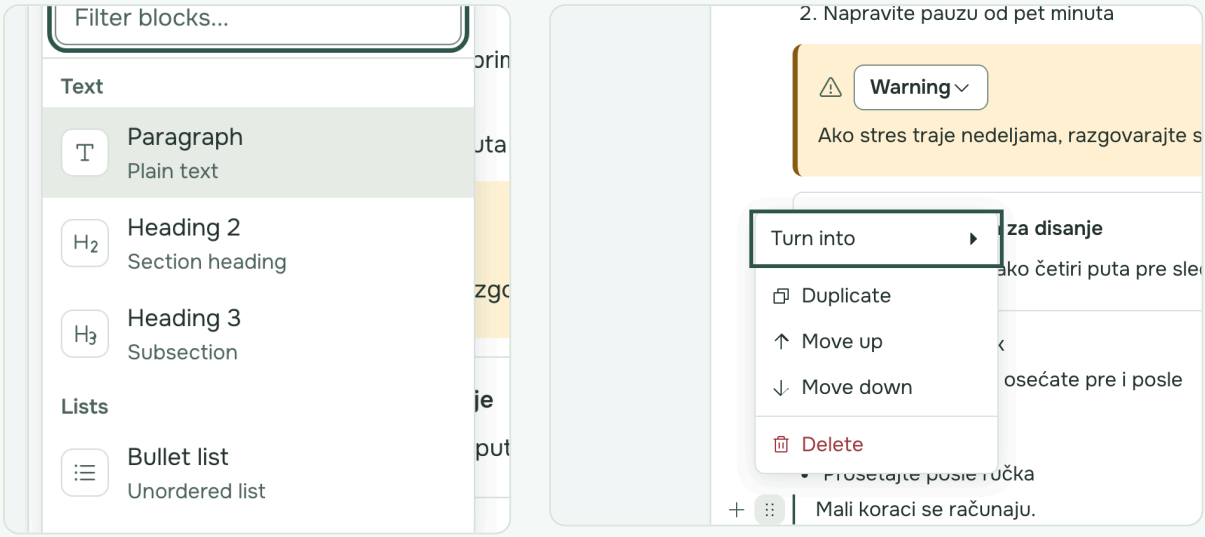

Select text to show the formatting bar: **Bold**, **Link** and **Turn into**, which changes the whole block (`Ctrl` + `B` and `Ctrl` + `K` work too; `Cmd` on a Mac). A link must be an `https://` address on the allowed list or another NestSelf article; anything else is refused.

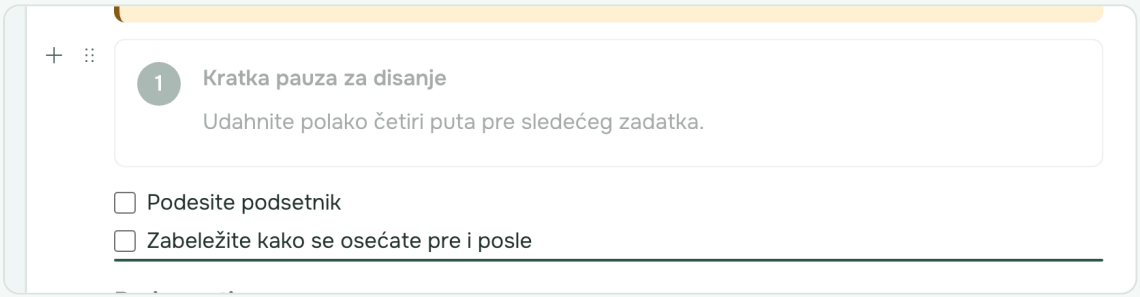

Left: the formatting bar. Right: an `http://` address is refused.

5 Move and change blocks

Hover a block: **Add block** (+) and a grip appear on its left. The + offers the same block types as `/`: pick one to turn that line into a heading, list or quote; an image, note or call to action replaces an empty line or goes below a filled one. Drag the grip to move the block up or down; a line shows where it lands. Click the grip for **Turn into**, **Duplicate**, **Delete**, **Move up** and **Move down**. From the keyboard: `Ctrl` + `/` (`Cmd` + `/` on a Mac) opens that menu, `Alt` + `Shift` + `↑` and `Alt` + `Shift` + `↓` move the block.

Left: the + offers the block types for that line. Right: the block menu, opened from the grip.

Dragging a block: it dims, and the line shows where it lands.

6 Add an image

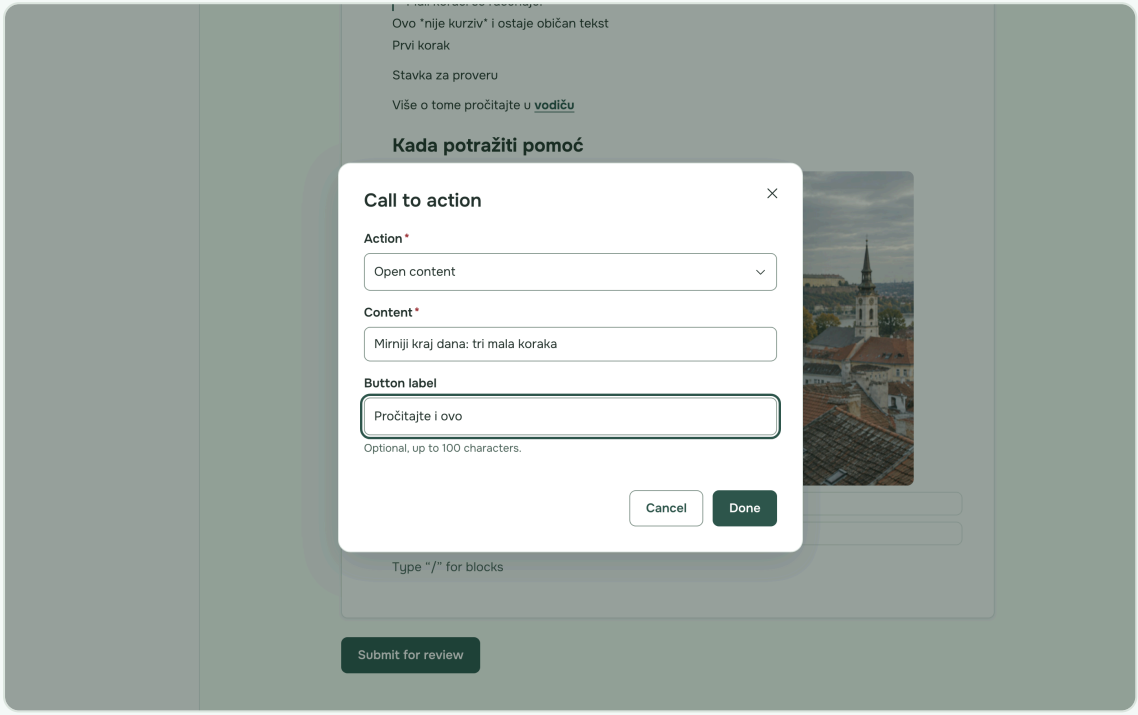

Choose **Image** in the block menu and pick a file, or drop or paste one. The block shows “Uploading…” and “Processing…” until the image is ready. **Alt text** is required: a short description for people who cannot see the image.

A processed image with its alt text and caption.

7 End with a call to action

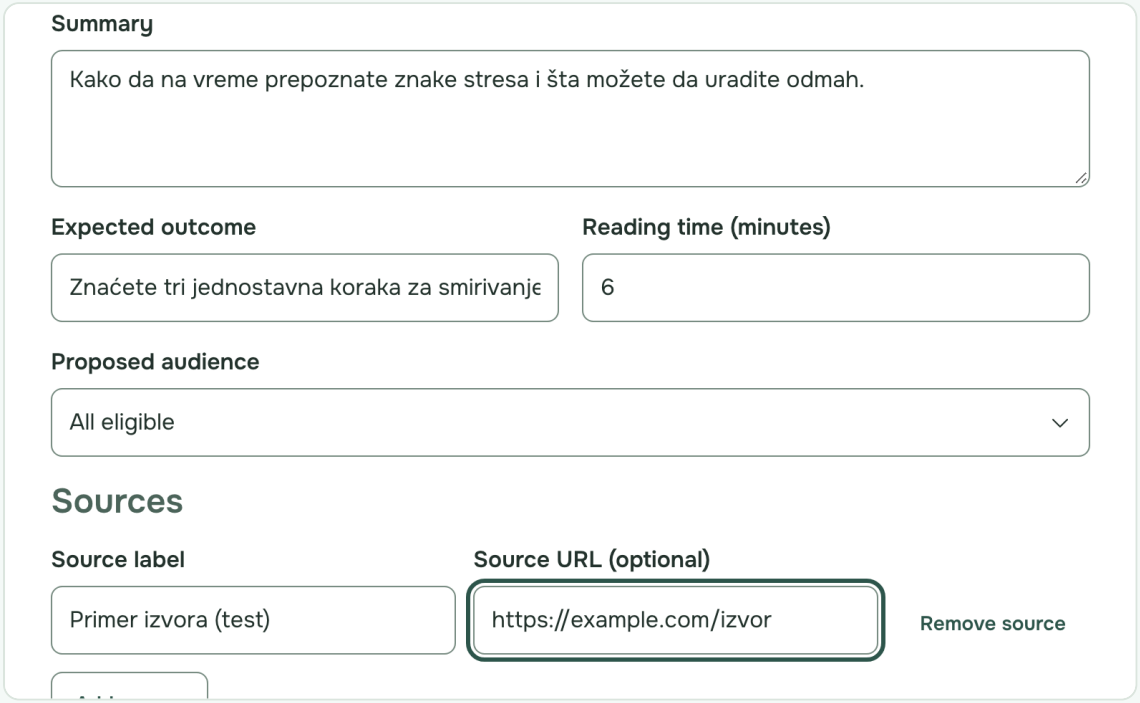

Call to action is the one button at the end of an article. Choose what it does (**Suggest topic**, **Open content**, **Open collection** or **Open service**), search for its target by title, optionally write a button label, and select **Done**. The block is added only when its target is set. **Related resource** adds a card for another article in the same way.

The call to action opens another published article.

8 Fill in the properties

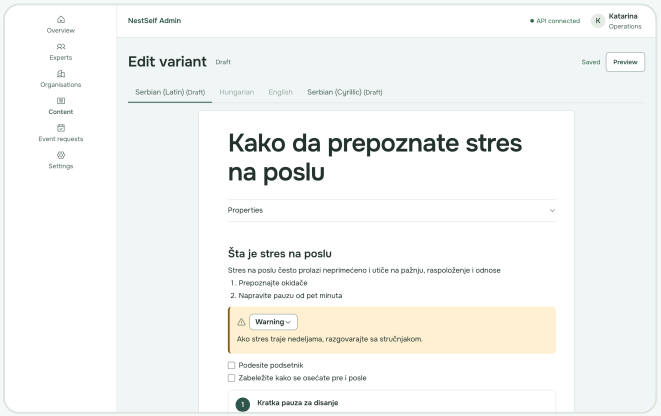

Open **Properties**: the **Summary** shown on cards, the **Expected outcome**, the reading time in minutes, the **Proposed audience** and the **Sources**. The audience is required before you submit; in this milestone it is **All eligible**.

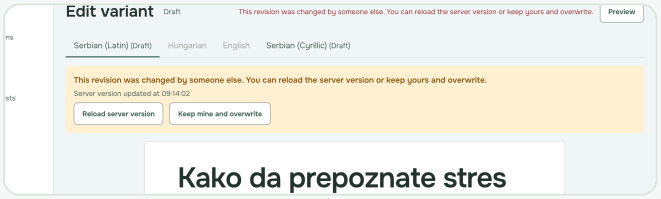

The article's properties.

9 Let it save

The editor saves a moment after you stop typing, and before you leave the page; the status reads “Saved”. If someone else saved the same draft meanwhile, saving stops and the editor says so: **Reload server version** continues from their copy.

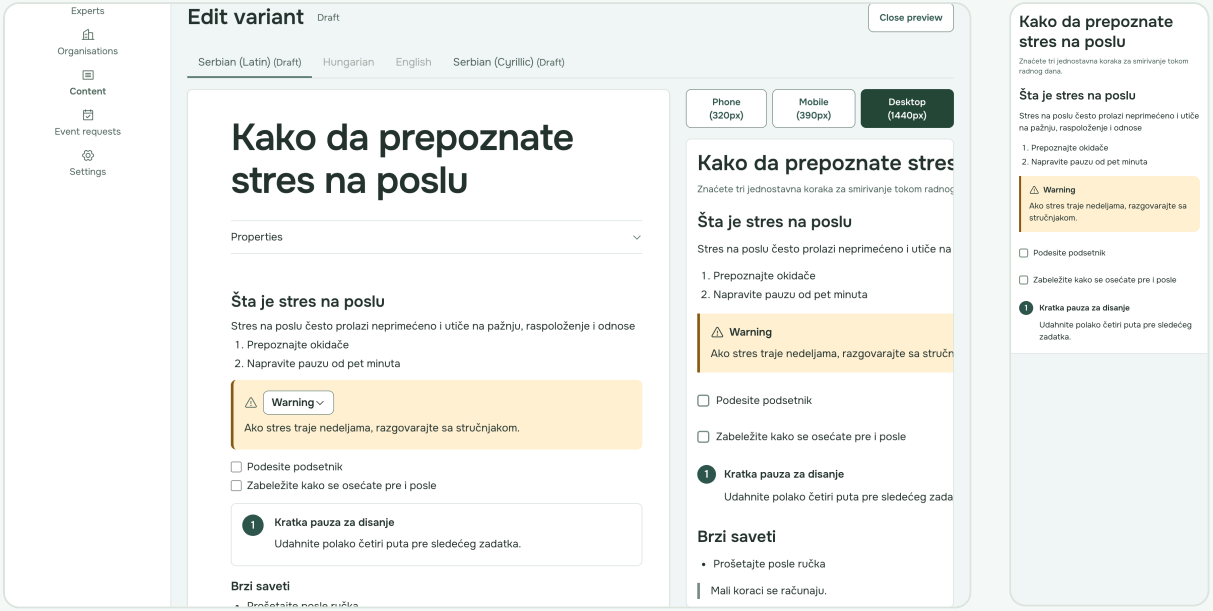

Left: saved. Right: someone else changed the draft.

10 Preview it

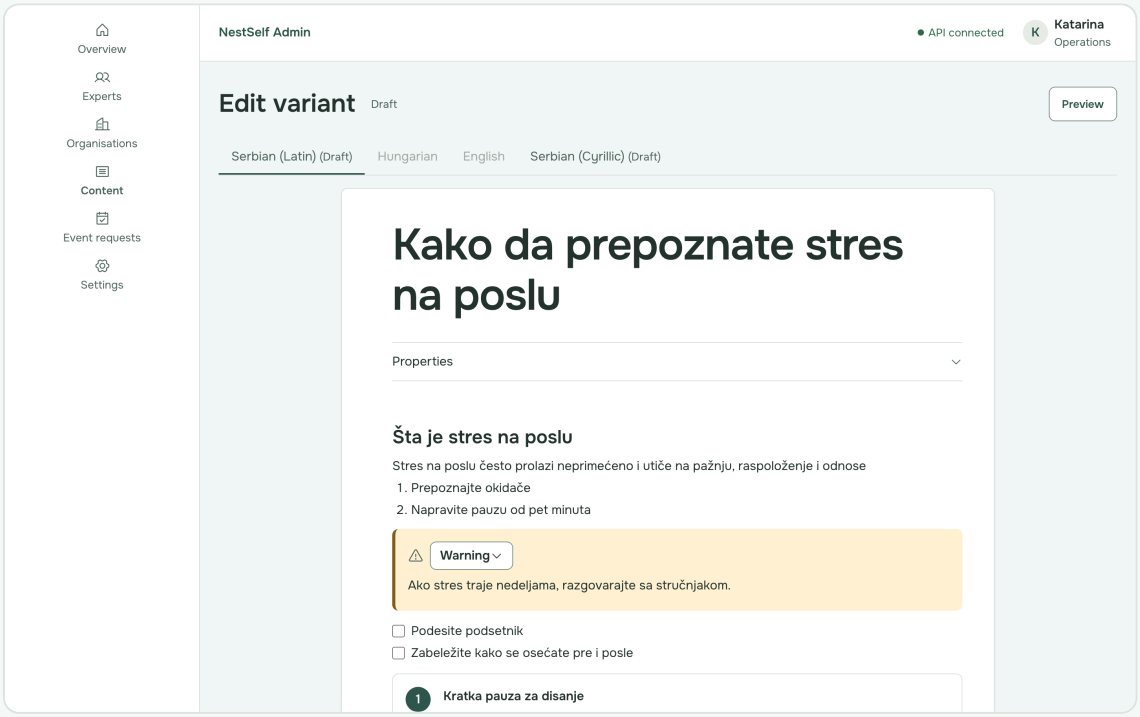

Preview shows the article as employees will see it, on a phone (390 px), a desktop (1440 px) or a small phone (320 px).

The desktop and the phone preview.

11 Write the other languages

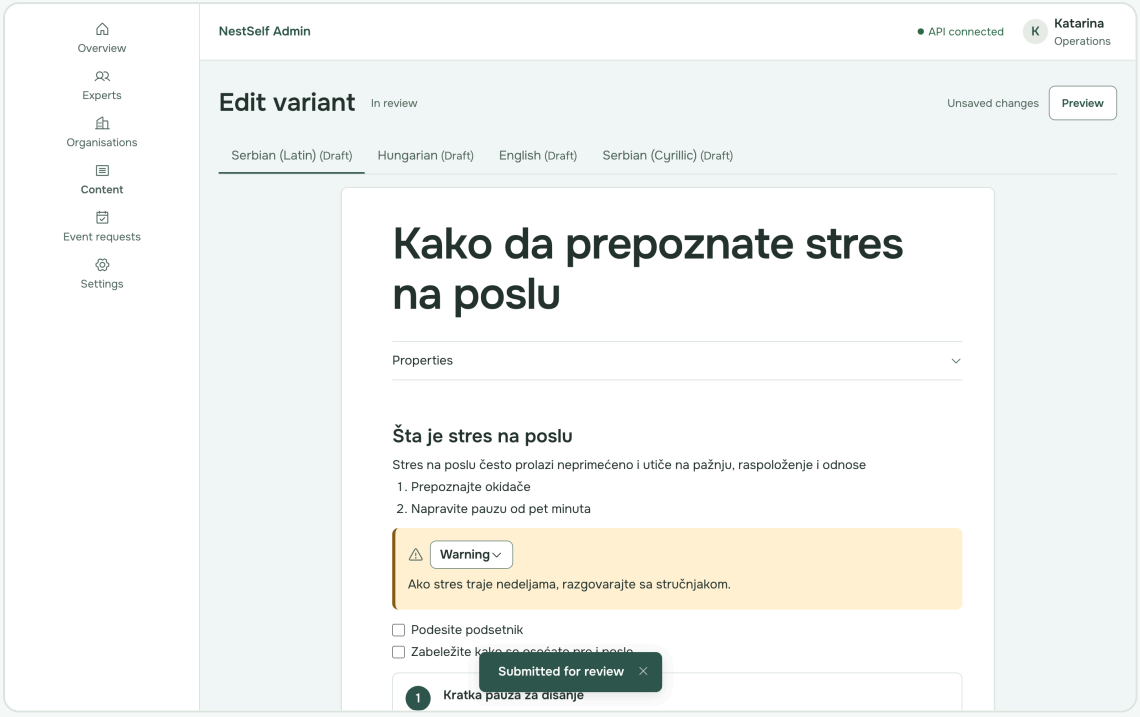

An article is published in Serbian (Latin), Hungarian and English together. Open each language tab and create its variant. Serbian (Cyrillic) is produced from the Latin text and is read-only.

The language tabs. Cyrillic follows Latin on its own.

12 Submit for review

Select **Submit for review** on each of the three languages. A submitted revision is locked until a reviewer approves or returns it.

The Serbian variant is in review.

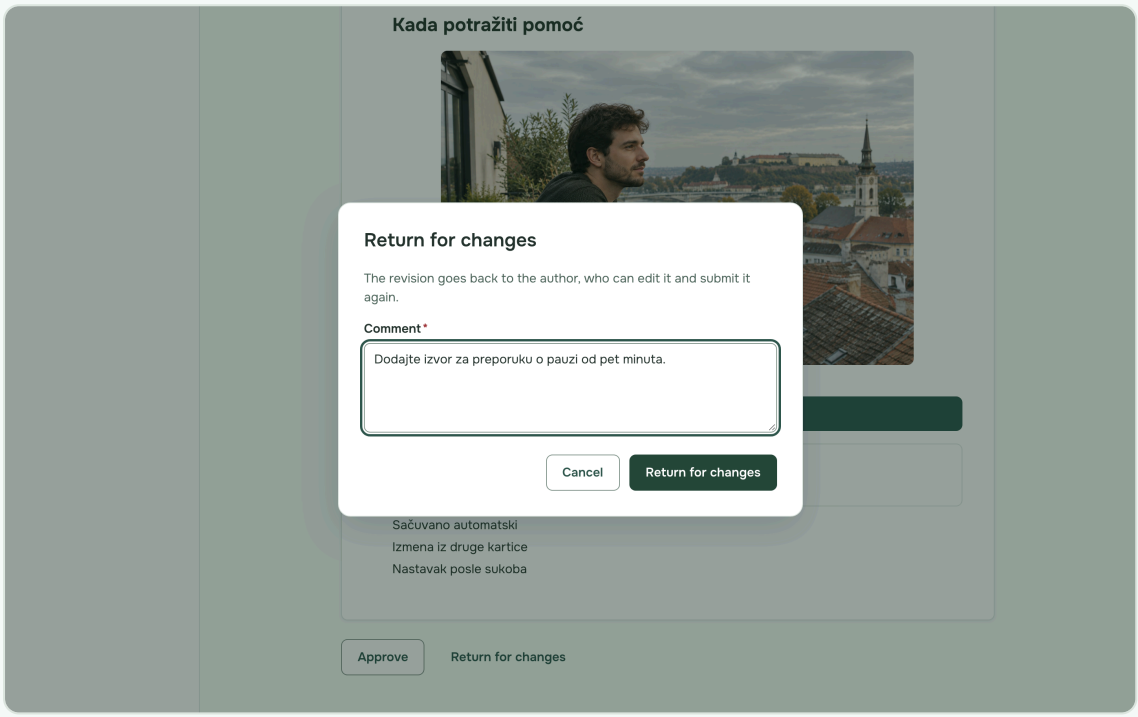

CHAPTER 3

Review it

Reviewer · admin app

1 Return it with a comment

Open the article in **Content** and switch to the language you review. **Return for changes** sends it back to the author and needs a comment. You cannot review a revision you wrote or last edited, or an article outside your review discipline.

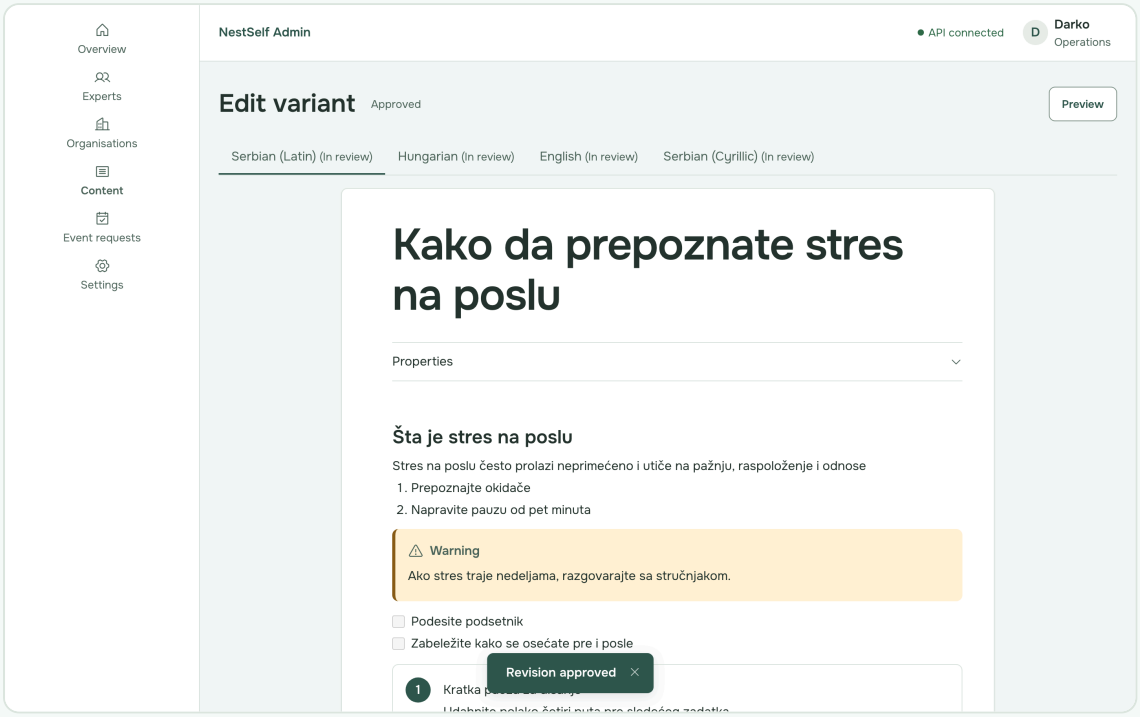

The reviewer explains what needs to change.

> **Tell the author directly for now**
>
> In this milestone the comment is recorded with the review but not yet shown to the author. It appears on the article in milestone 2.

2 Approve it

When the author has resubmitted, **Approve** accepts exactly that revision. Approve each of the three languages.

The revision is approved.

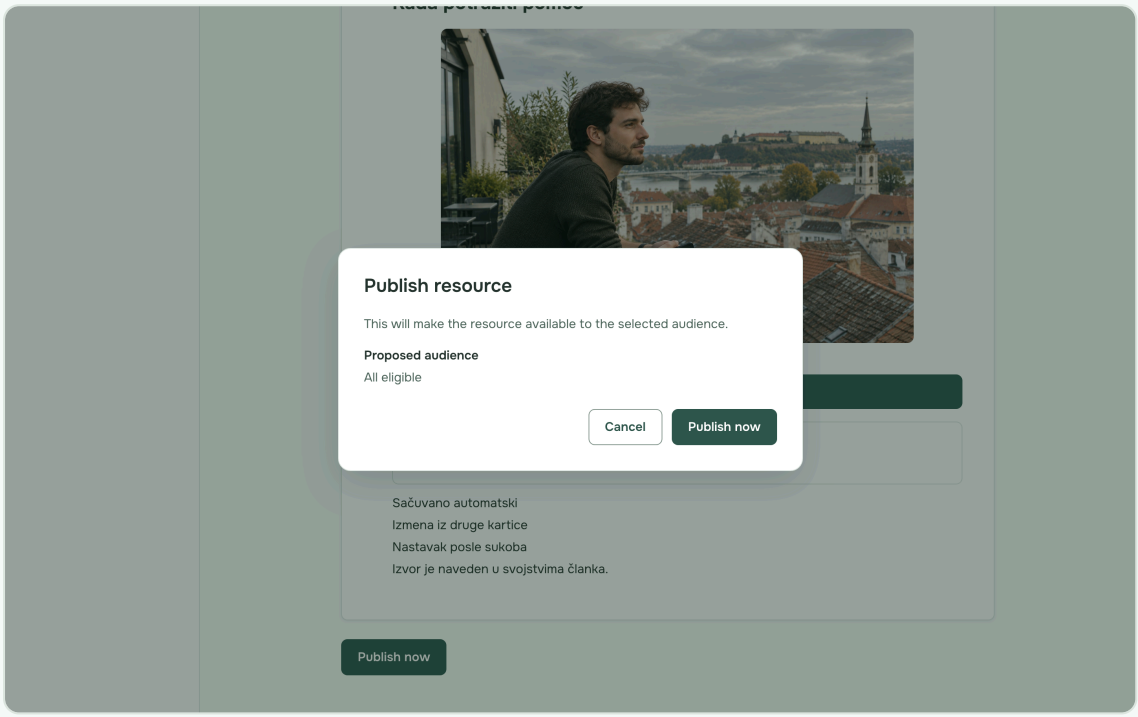

CHAPTER 4

Publish it

Publisher · admin app

1 Publish now

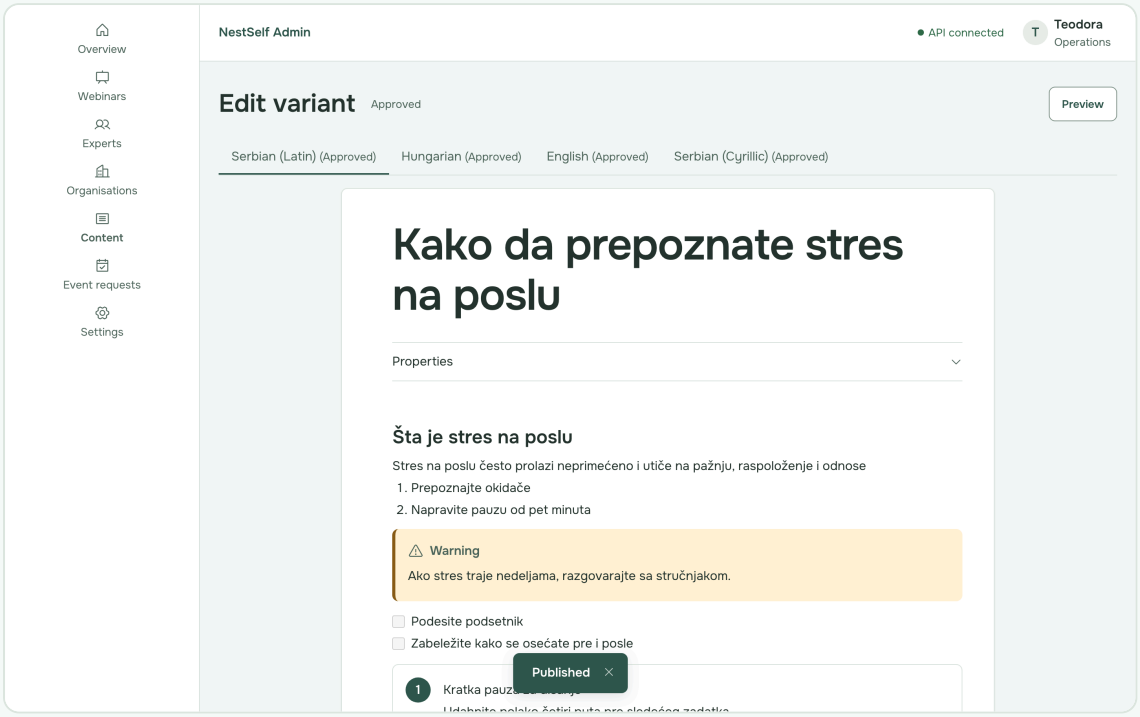

When all three languages are approved, **Publish now** opens a confirmation with the audience the reviewers approved. Confirm it to publish.

The confirmation shows the approved audience.

2 Check that it is live

The article is live in all four languages at once. A later approved revision replaces it when you publish again.

The publication is live.

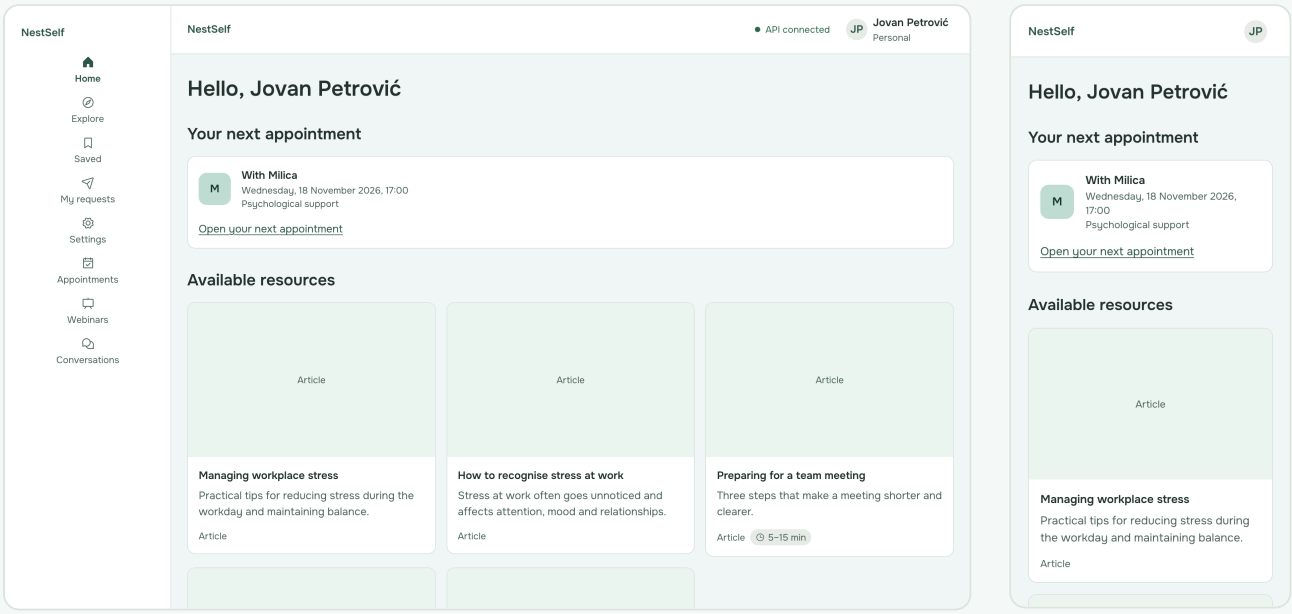

CHAPTER 5

Read it as an employee

Employee · workspace app

1 Find it on Home

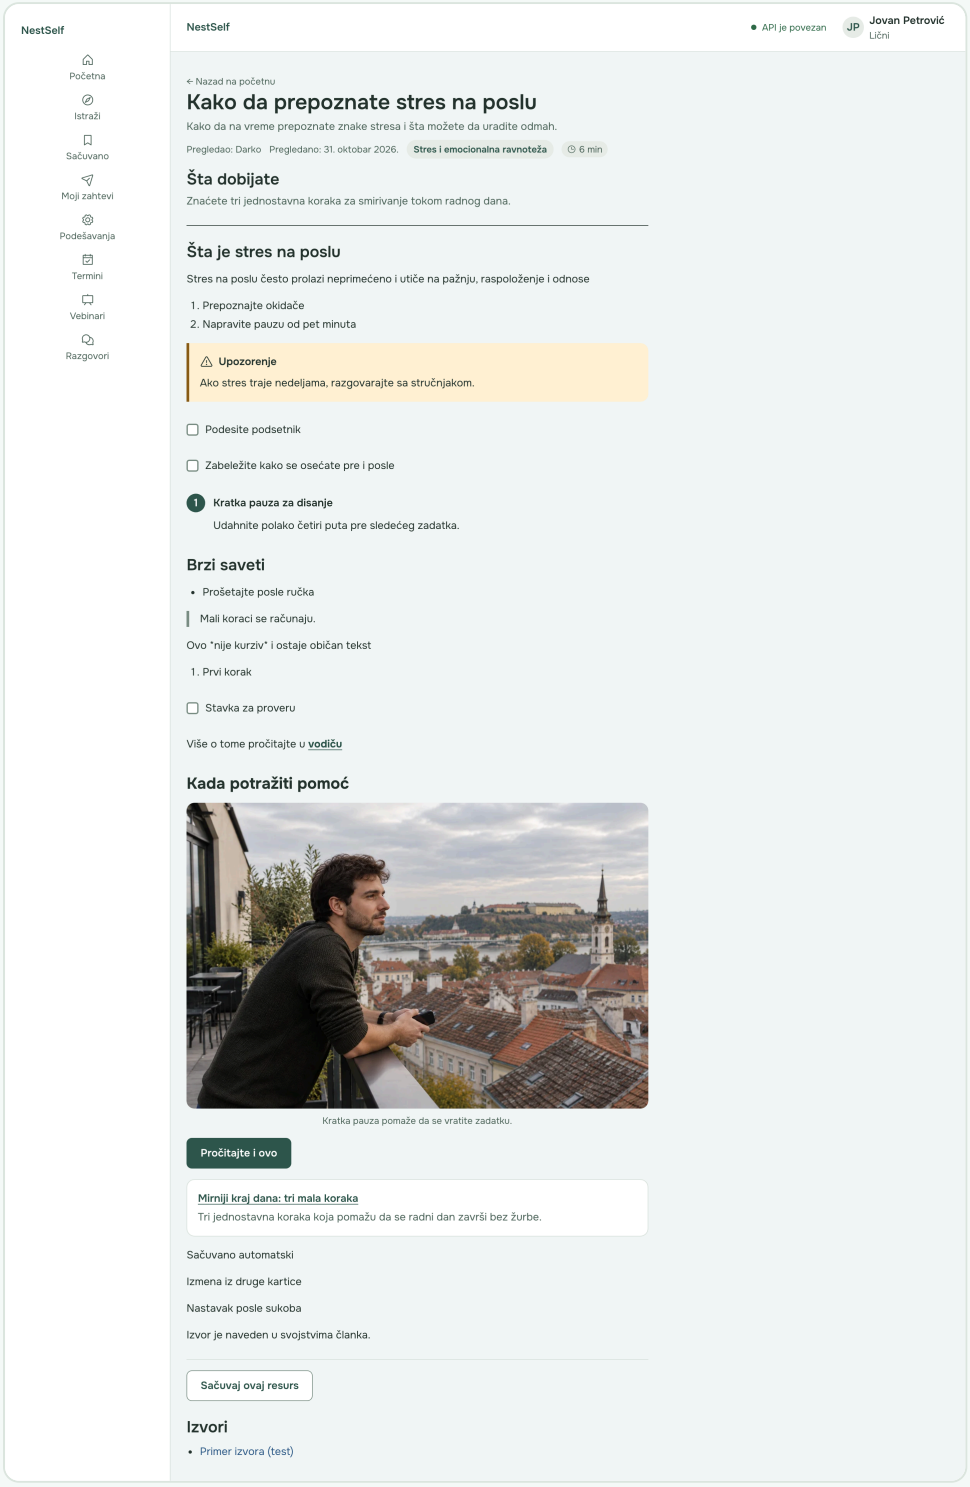

Home lists the articles available to your organisation, on a computer or a phone.

Home on a computer and on a phone.

2 Read it

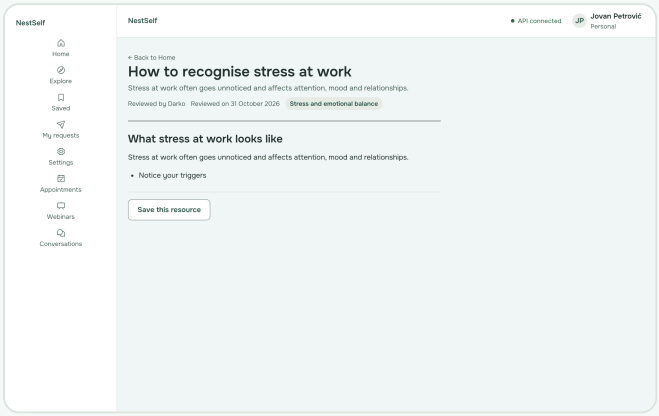

The article shows its summary, what you gain, the reading time, who reviewed it and when, and then the body with its notes, steps, checklists, images, related articles and the call to action at the end.

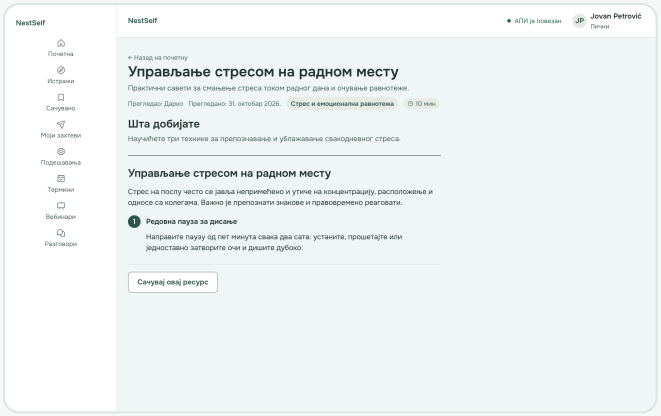

The whole article, in Serbian.

3 Read it in your language

Choose your **Language** under **Settings**. Serbian comes in Latin and in Cyrillic script.

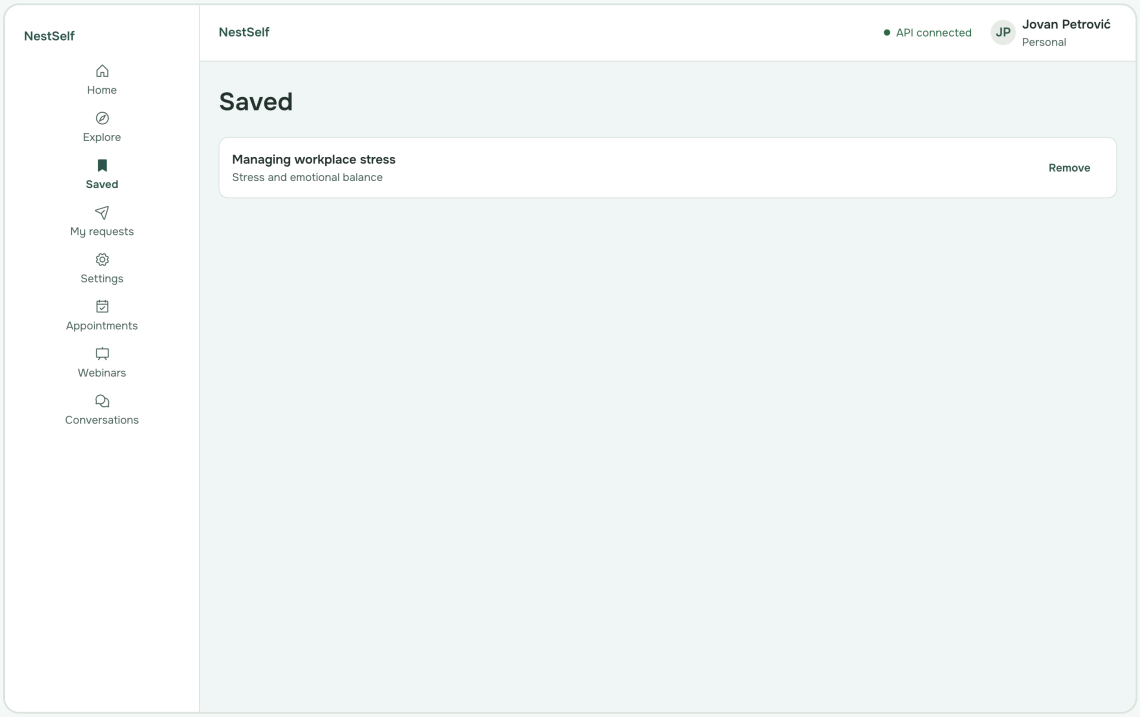

Left: the English variant. Right: an article in Serbian Cyrillic.

4 Save it for later

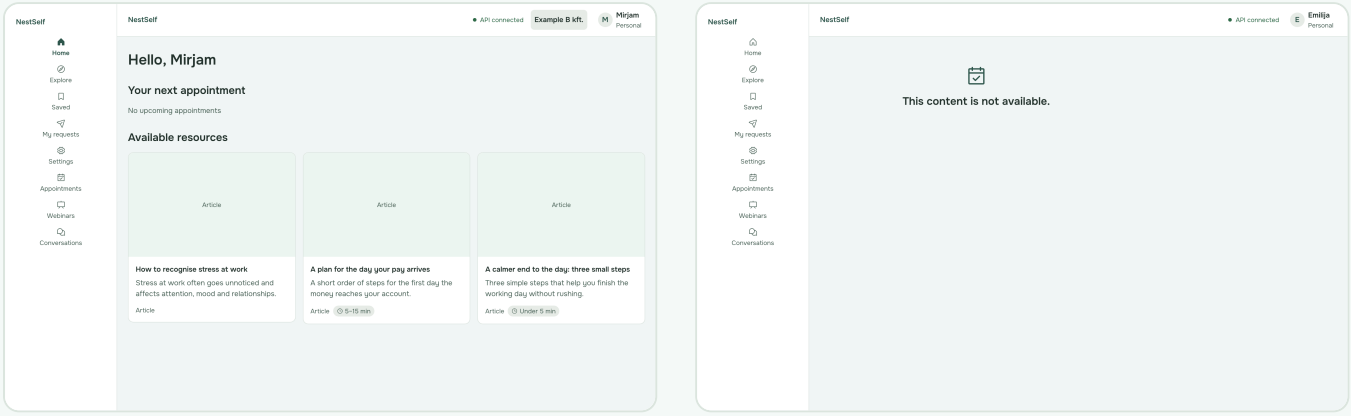

Save this resource keeps the article under **Saved**.

The saved list.

5 Work for two organisations

If you work for two client organisations, switch between them at the top of the page. Each one shows only its own articles and saved list; an article of the other shows “This content is not available”

Left: Home in the second organisation. Right: an article it cannot see.

CHAPTER 6

Quick reference

Shortcuts, states and what comes next.

Keyboard

Keys	Where	What it does
`/`	Body	Opens the block menu
+ (on hover)	Any block	Offers the block types for that line
Grip (drag)	Any block	Moves the block where the line shows
`↑` `↓` `Enter` `Esc`	Block menu	Move, insert, close
`Ctrl` + `B` (`Cmd` + `B`)	Selection	Bold
`Ctrl` + `K` (`Cmd` + `K`)	Selection	Link
`Ctrl` + `/` (`Cmd` + `/`)	Any block	Opens the menu of the current block
`Alt` + `Shift` + `↑` / `↓`	Any block	Moves the block up or down
`##` `###` `-` `1.` `>` `[]` and a space	Start of a line	Heading, subheading, bulleted list, numbered list, quote, checklist

Revision states

Draft	The author is writing. Saved automatically.
In review	Submitted and locked until a reviewer decides.
Changes requested	Returned to the author, who edits and submits again.
Approved	Ready to publish once all three languages are approved.

Not in this milestone yet

Audiences
Publishing to chosen organisations or teams, and scheduling, come in milestone 2. Today the editor offers All eligible and keeps a narrower audience already stored on an article.

Review history
Return comments on the article, and notifications for authors and reviewers, come in milestones 2 and 3.

More formats
Video, audio, practical guides and collections come in milestone 2.

Discovery
Search and categories on Home come in milestone 2.
