Expert guide

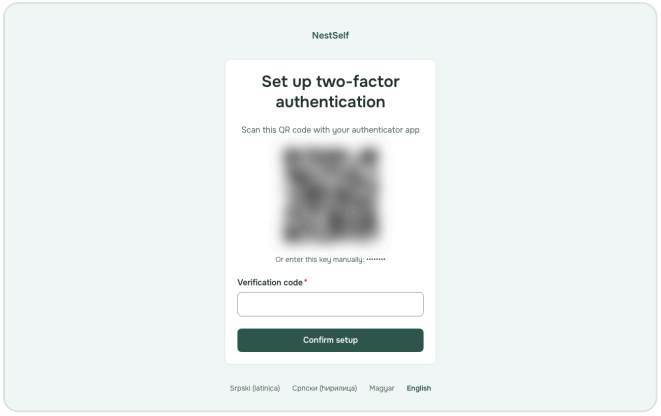

Who this is for: experts who read the conversations of the cases assigned to them in NestSelf. The pictures show fictional sample people.

Sign in with your password and authenticator

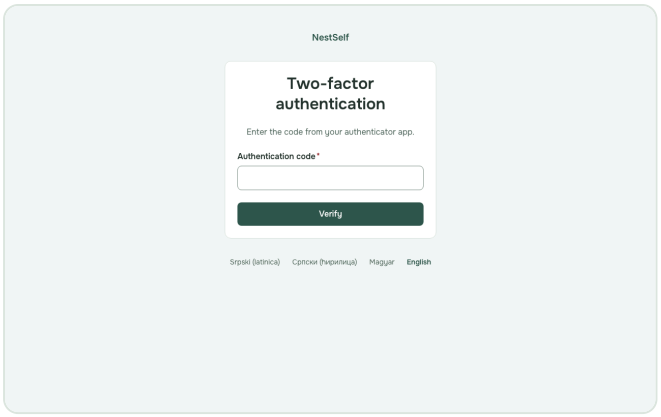

1. Open NestSelf, type your email address and press **Continue**.
2. Type your password and press **Sign in**.

   If it fails: "The email or password is not correct." Type the password again, or press **Forgot password?**.
3. The first time, scan the QR code with your authenticator app, type the code it shows and press **Confirm setup**.

   The QR code and the key are hidden in this picture.
4. Every other time, type the code from your authenticator app and press **Verify**.

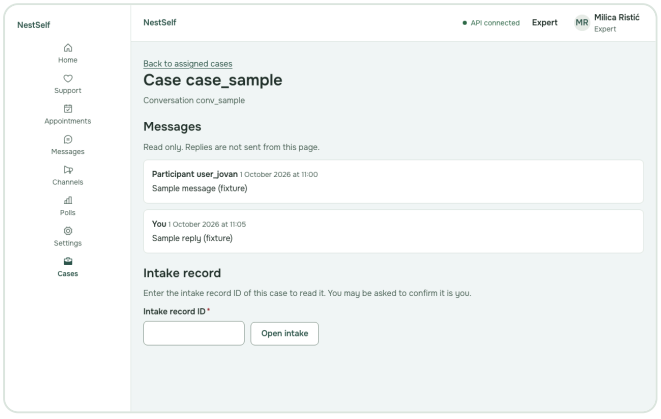

If it fails: "The code you entered is not valid." Wait for the next code in the app and type it.

Open a case

1. Choose **Cases** in the menu on the left.

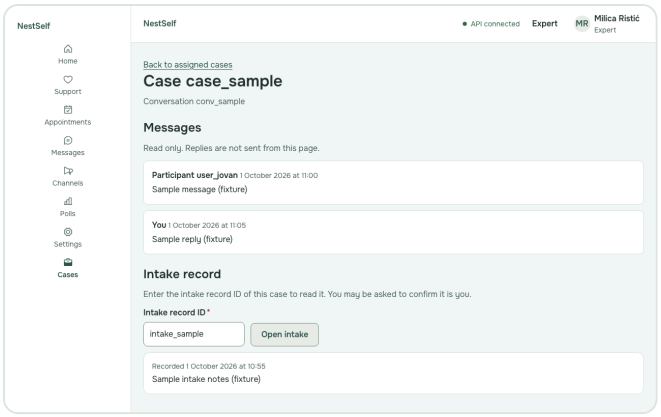

2. Press **Open** next to the case to read its messages.

Read the intake record

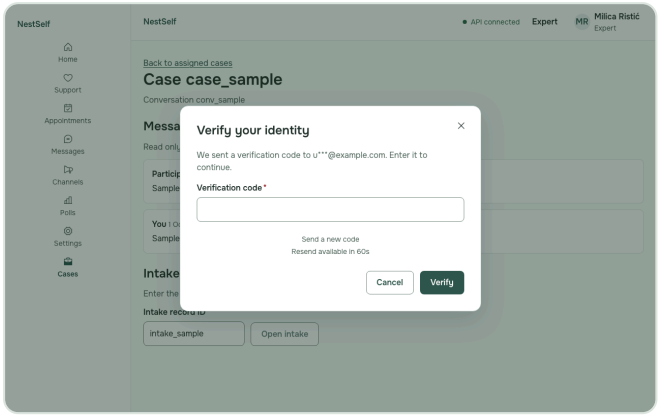

1. Type the intake record ID of the case under **Intake record** and press **Open intake**.

If it fails: "This record does not exist or is no longer available." Check the ID, and whether the case is still assigned to you.

Verify your identity

1. When **Verify your identity** opens as you open a case or an intake record more than 15 minutes after signing in, type the code NestSelf emailed you and press **Verify**.

If it fails: "The code you entered is not valid." Type the code from the newest email, or press **Send a new code**.

What you cannot see

The **Cases** list shows only the cases assigned to you, and any other case opens with "This record does not exist or is no longer available." Messages and intake records are read-only here: you cannot reply or change them. The organisation's people, org units and access pages are not in your menu.
