nestself

Consultations and webinars

User manual. Private video sessions with a NestSelf expert, follow-ups and their approval, and webinars for employees of client companies, screen by screen.

Epic NS-CALLS-01
Edition of 30 October 2026

Readers
Employees, experts, HR and approvers, NestSelf operations

Screens
From the sample environment, fictional people

This edition is in English. The product ships in Serbian (Latin), Serbian (Cyrillic) and Hungarian as well as English; a Serbian edition is the same build with the sr-Latn locale.

CHAPTER 1

How to use this manual

Four audiences, two web apps. Screens from the sample environment.

This manual explains the video consultations and webinars of NestSelf as each person meets them: what you see, what each button does, and what NestSelf keeps private. Read the chapter for your role; the last three chapters are for everyone.

Employees

You use the **workspace app**. Chapter 2 follows a consultation from the appointment list to the follow-up; chapter 5 covers webinars.

Experts

You use the **admin app**. Chapter 3 covers your consultations, the outcome and the follow-up; chapter 6 covers presenting a webinar.

HR and approvers

You use the **workspace app**, in the employer space. Chapter 4 covers the follow-up approval policy and deciding requests.

NestSelf operations and support

You use the **admin app**. Chapter 6 covers creating and moderating webinars; chapter 7 covers booking consultations and call diagnostics.

About the screenshots

Every screenshot comes from the sample environment: both web apps ran against the NestSelf API with a test database of fictional sample people, and a stand-in replaced the video service. The other person's video is a drawing labelled “Sample video”, and the camera preview is the browser's test pattern. The people are fictional: Jovan Petrović (employee), Milica Ristić (expert), Ivana Jovanović (HR and approver) and Nikola Đorđević (operations and webinar moderator). No real personal data appears.

Each screen is shown on a computer (1280 by 800, left) and on a phone (390 by 844, right). The screen numbers match the files in `manual/screenshots/`. Lists in the screenshots may hold several similar entries that the test runs created.

How the text is written

Buttons, fields and menu entries are in bold green, for example **Join session**. Messages the app shows are in quotes, for example “Five minutes left.” Both are copied from the app's English wording.

Times are always shown in the time zone of the appointment or webinar, Europe/Belgrade in the screenshots. Where a message contains a time or a date, this manual writes HH:MM or DATE.

The product ships in Serbian (Latin), Serbian (Cyrillic) and Hungarian as well as English, and every screen works the same in each language. A Serbian edition of this manual is the same build with the sr-Latn locale.

CHAPTER 2

Employees: your consultations

Workspace app. Signed in as the sample employee, Jovan Petrović.

You meet a NestSelf expert in a private video session in the workspace app. Only the two of you are in the room, and the session is not recorded. This chapter follows one consultation from the appointment list to the follow-up.

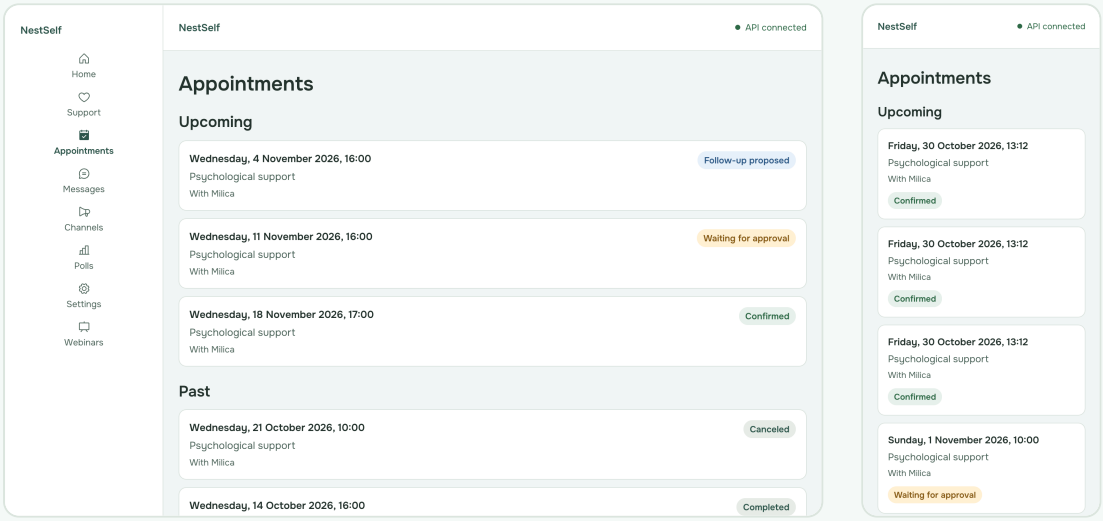

2.1

Your appointments

The appointment list

Open **Appointments** in the menu. **Upcoming** lists the sessions to come, the earliest first; **Past** lists the ones that are over. Each row shows the date and time, the service and your expert's first name. A badge shows the status: **Confirmed**, **Waiting for approval**, **Completed**, **Canceled**, **Declined**, **Missed**, or **Follow-up proposed** when your expert proposed another session. Select a row to open it.

Before each session you receive an email 24 hours and 1 hour ahead. Its subject is always “Your NestSelf session” and its calendar entry is private, so nothing on a lock screen says what the session is about. If you are in the app at that moment, a short notice says “Reminder: your NestSelf session starts at HH:MM.”

Employee · workspace app Upcoming and past appointments with their status badges. Screen 01, desktop and mobile

2.2

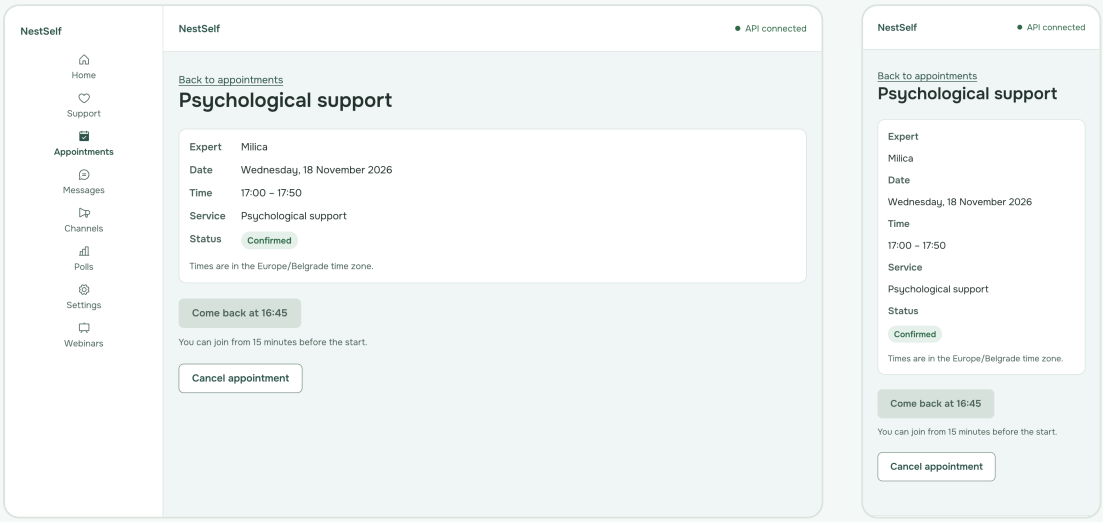

Before the session: the join window

Joining opens 15 minutes before the start. The first join is possible until 10 minutes after the start; if you already joined and dropped out, you can rejoin until the room closes, 15 minutes after the scheduled end.

Before the window opens

The appointment page shows your expert, the date, the time, the service and the status. Until the window opens, the button reads **Come back at HH:MM** and cannot be selected, with the hint “You can join from 15 minutes before the start.”

You can cancel here. **Cancel appointment** asks “Cancel this appointment?” first, and a canceled appointment cannot be restored.

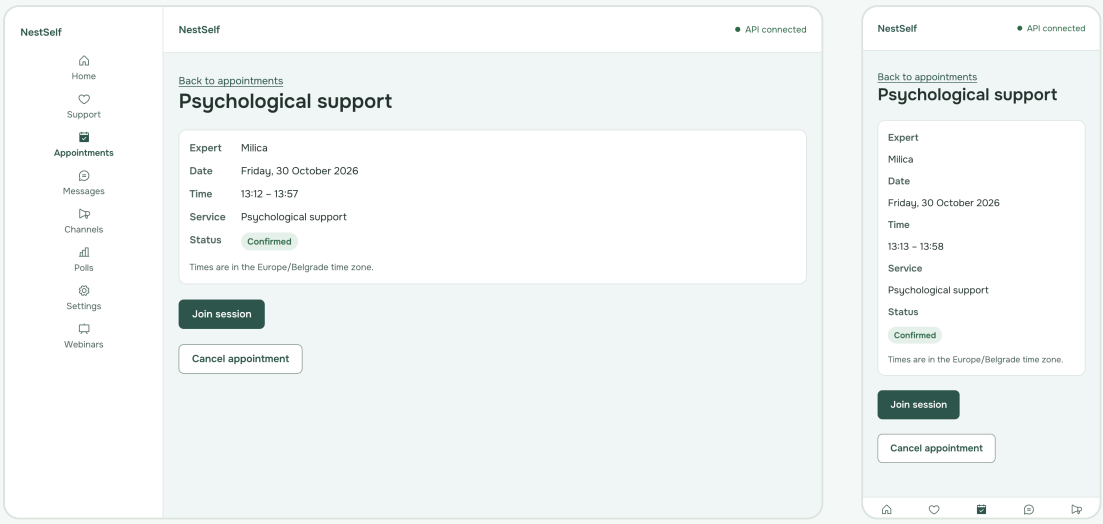

Employee · workspace app Appointment detail before the join window: **Come back at 16:45** is disabled. Screen 02, desktop and mobile

When the window is open

From 15 minutes before the start, **Join session** is active. Select it to check your devices. If you open the page after the start, it says “Your session started at HH:MM. You can still join for the remaining time.” The timer then counts only the time that remains.

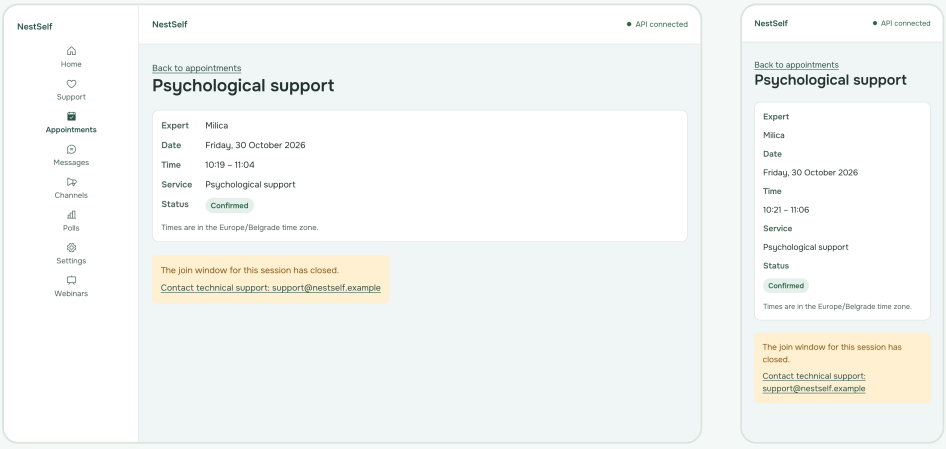

If you already joined and lost the call, the page offers **Rejoin session** and says “If you already joined this session, you can rejoin until HH:MM.”

Employee · workspace app Appointment detail inside the join window: **Join session** is enabled. Screen 03, desktop and mobile

When the window has closed

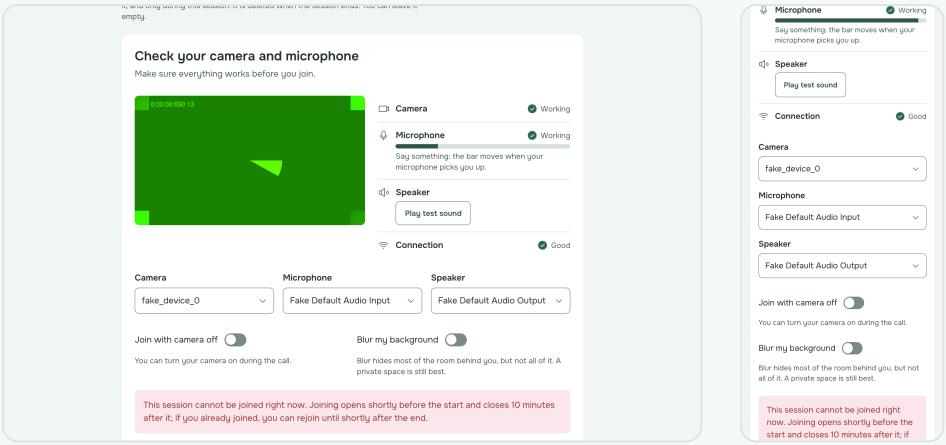

If you come too late for the first join, the page says “The join window for this session has closed.” and shows a link to technical support instead of the button. You also receive an email asking whether a technical problem kept you away, with a link to report it.

Employee · workspace app Join window closed: the message and the technical support link. Screen 28, desktop and mobile

If the server refuses the join

The server checks the window again when you select **Join now**. If it has closed in the meantime, the device check shows “This session cannot be joined right now. Joining opens shortly before the start and closes 10 minutes after it; if you already joined, you can rejoin until shortly after the end.”

Employee · workspace app The join was refused because the window had closed. Screen 29, desktop and mobile

2.3

Checking your devices

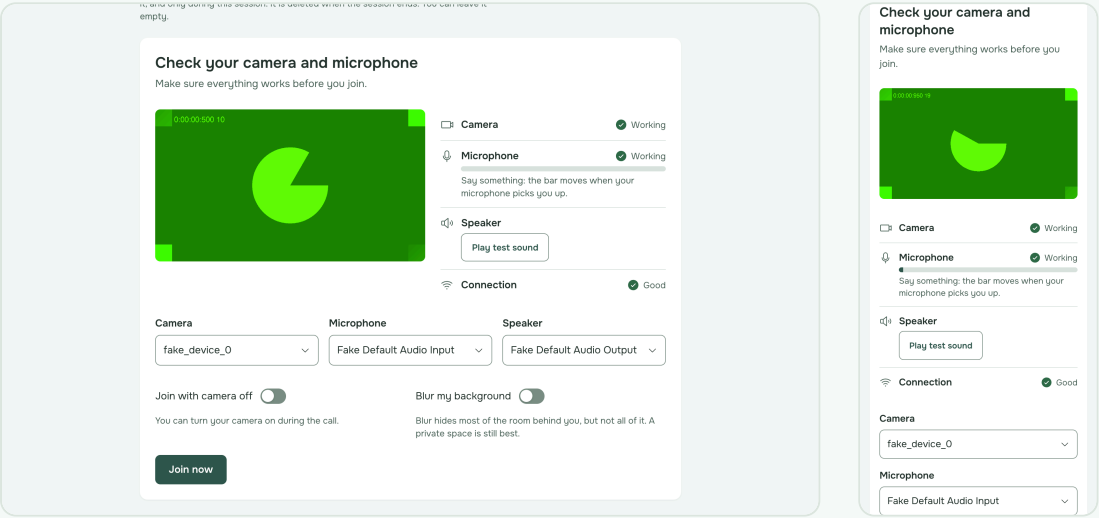

Every call starts with a short device check. You join only when your microphone works.

The device check

The page “Check your camera and microphone” checks your **Camera**, **Microphone**, **Speaker** and **Connection**. Each shows **Working**, **Blocked by the browser** or **Not working**. Speak and watch the microphone bar move; select **Play test sound** and answer “Did you hear the test sound?” Choose another camera, microphone or speaker from the three lists if needed. The connection reads **Good**, **Fair**, **Poor** or **Offline**.

If the browser blocks the camera or microphone, a box titled “Allow your camera and microphone” explains what to do in your browser; then select **Check again**. **Join now** stays disabled until the microphone is allowed.

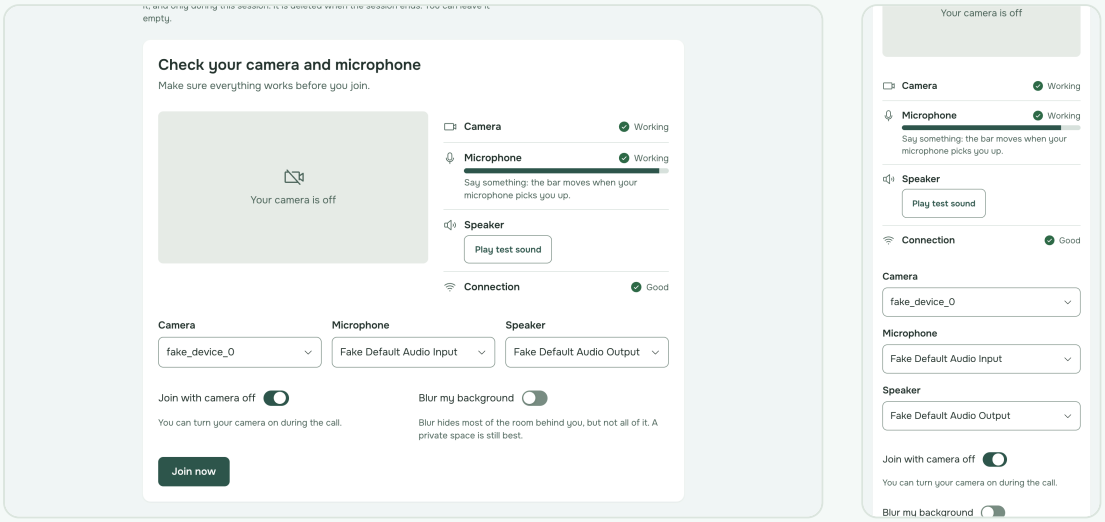

For a psychological consultation the page first offers an optional field, **Your current location**: “Share your current location with the expert for safety purposes.” “Only your expert sees it, and only during this session. It is deleted when the session ends. You can leave it empty.” It sits above the check, outside the screenshot.

Employee · workspace app Device check passed: preview, microphone level, speaker test, connection Good. Screen 04, desktop and mobile

Camera off and background blur

Switch on **Join with camera off** to join without video; the preview shows “Your camera is off” and the hint “You can turn your camera on during the call.” Switch on **Blur my background** to blur the room behind you: “Blur hides most of the room behind you, but not all of it. A private space is still best.” Both choices are optional and are remembered on this device for your next session. Some browsers cannot blur: “Background blur is not available in this browser.”

Employee · workspace app **Join with camera off** switched on; the blur switch beside it. Screen 05, desktop and mobile

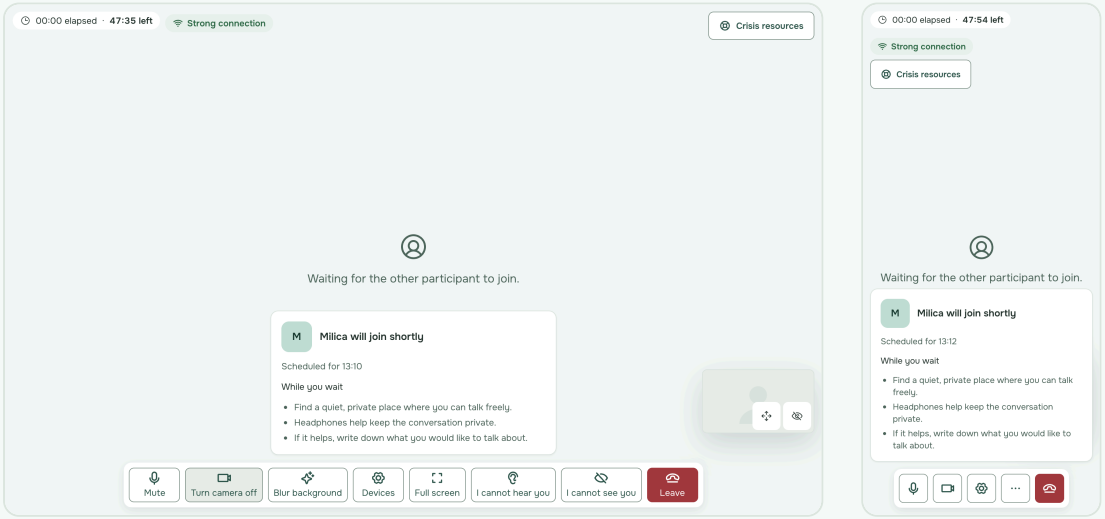

2.4

Waiting for your expert

The waiting card

After **Join now** you are in the call. If your expert has not joined yet, the stage says “Your expert will join shortly” and a card shows “Milica will join shortly”, the scheduled time and three tips under “While you wait”.

If your expert is running late, the card says so: “Your expert is running late and will join in about 5 minutes.” or “Your expert is running a few minutes late.” You do not need to do anything; the call starts when the expert joins.

Employee · workspace app In the call before the expert arrives: the waiting card with tips. Screen 06, desktop and mobile

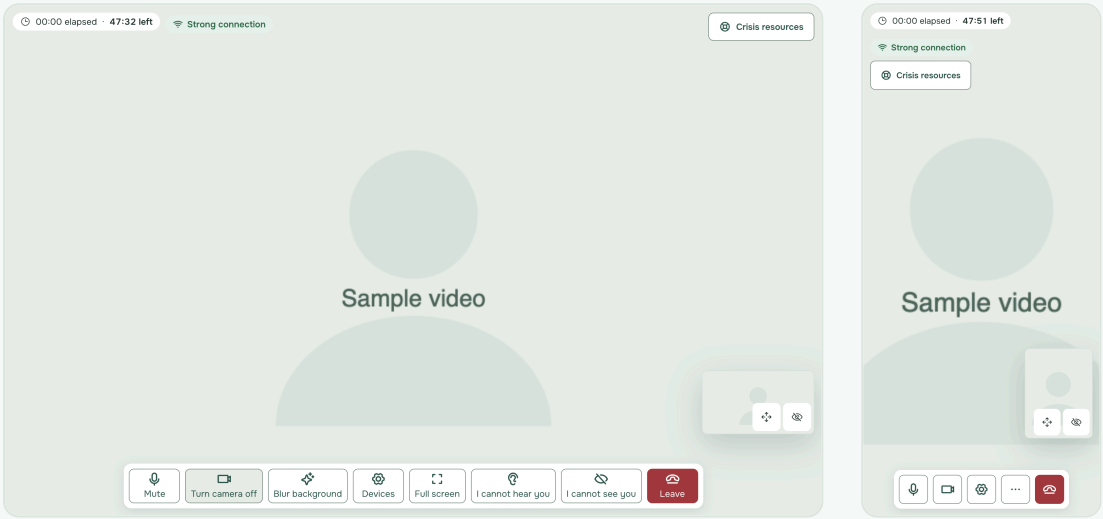

2.5

During the call

The call screen

Your expert fills the screen and your own video sits in a corner. Move it with “Move your video to another corner” or hide it; hidden, it says “Your video is hidden from you. The other participant still sees it.” At the top: the timer with time elapsed and time left, the connection badge, and **Crisis resources**.

The control bar: **Mute**, **Turn camera off**, **Blur background**, **Devices**, **Full screen**, **I cannot hear you**, **I cannot see you** and **Leave**. Every control works with the keyboard. A consultation has no chat and is never recorded, so no recording control or sign appears.

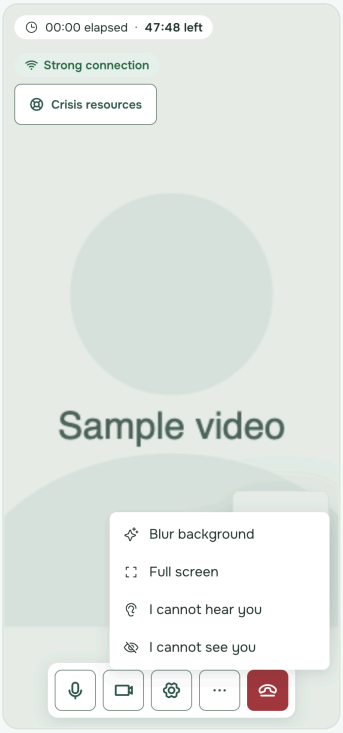

Employee · workspace app In the call with the expert present: timer, connection badge, crisis resources, controls. Screen 07, desktop and mobile

On a phone, and the quick signals

On a phone the video fills the screen and the bar keeps the main controls. **More** opens the rest: blur, full screen, **I cannot hear you** and **I cannot see you**.

I cannot hear you sends a short notice instead of a chat message. The other person sees “The other participant cannot hear you.” The notice is not kept after the session. **I cannot see you** works the same way.

Employee · workspace app

At phone width the secondary controls sit under **More**.

Screen 08, mobile

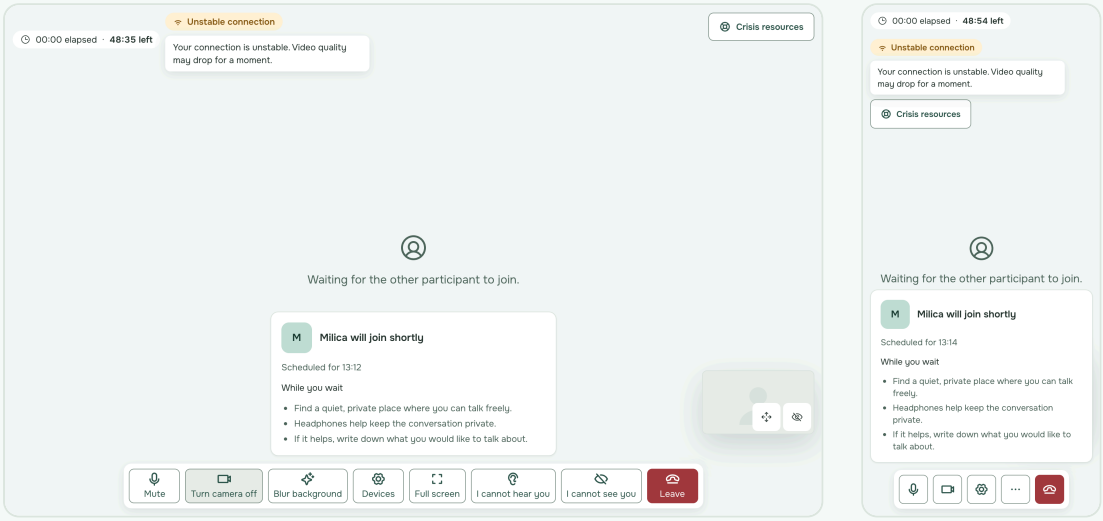

2.6

Your connection

The badge shows **Strong connection**, **Unstable connection** or **Poor connection**, measured every 30 seconds. On a weak connection the app protects the sound: it lowers your video first, then pauses it.

An unstable connection

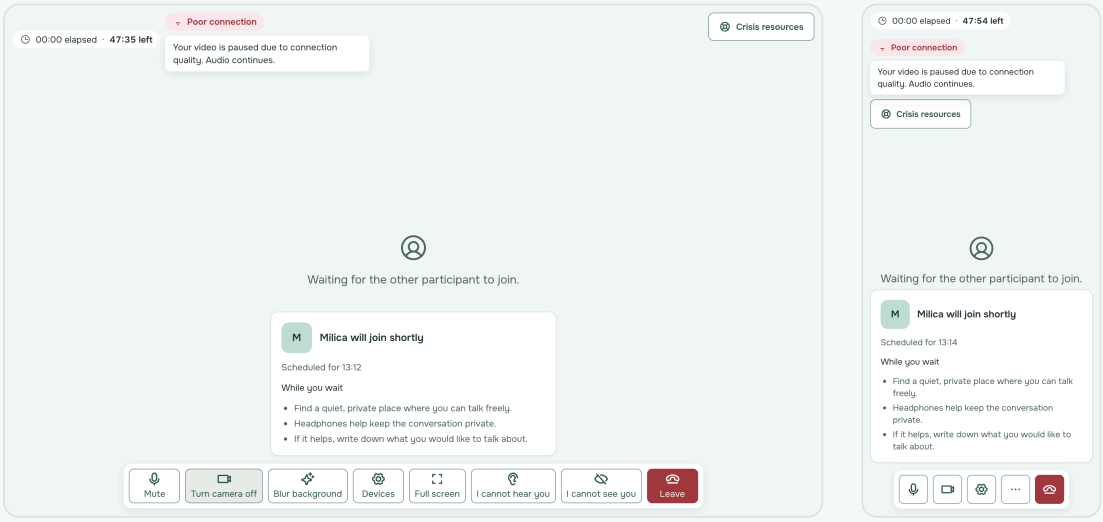

When the connection weakens, the badge turns yellow and a banner says “Your connection is unstable. Video quality may drop for a moment.” If it gets worse: “Your connection is poor. Video quality may be lowered to keep the sound clear.” You can keep talking.

Employee · workspace app **Unstable connection**: the yellow badge and its banner. Screen 10, desktop and mobile

Video paused, audio continues

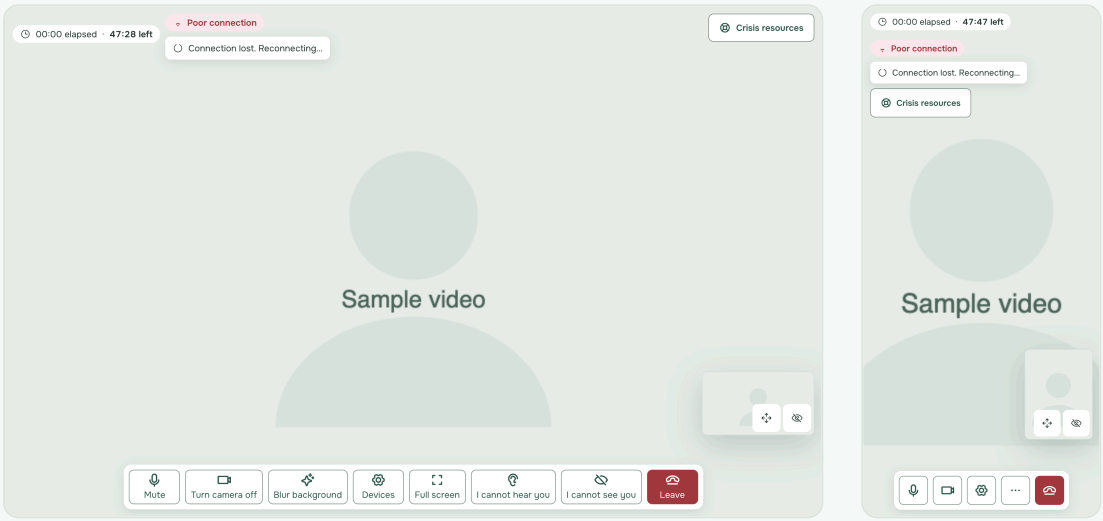

After two poor measurements your outgoing video pauses and the banner says “Your video is paused due to connection quality. Audio continues.” When the connection recovers, your video comes back by itself and the banner disappears.

Employee · workspace app Degraded mode: the red badge, outgoing video paused. Screen 11, desktop and mobile

Connection lost

If the connection drops, the app shows “Connection lost. Reconnecting…” and tries for up to two minutes. If that fails, it shows “Unable to reconnect” and “The connection could not be restored. Rejoin to continue.” with **Rejoin** and **Contact support**. Rejoining puts you back into the same session while the room is open.

Employee · workspace app Connection lost: the reconnecting notice under the badge. Screen 09, desktop and mobile

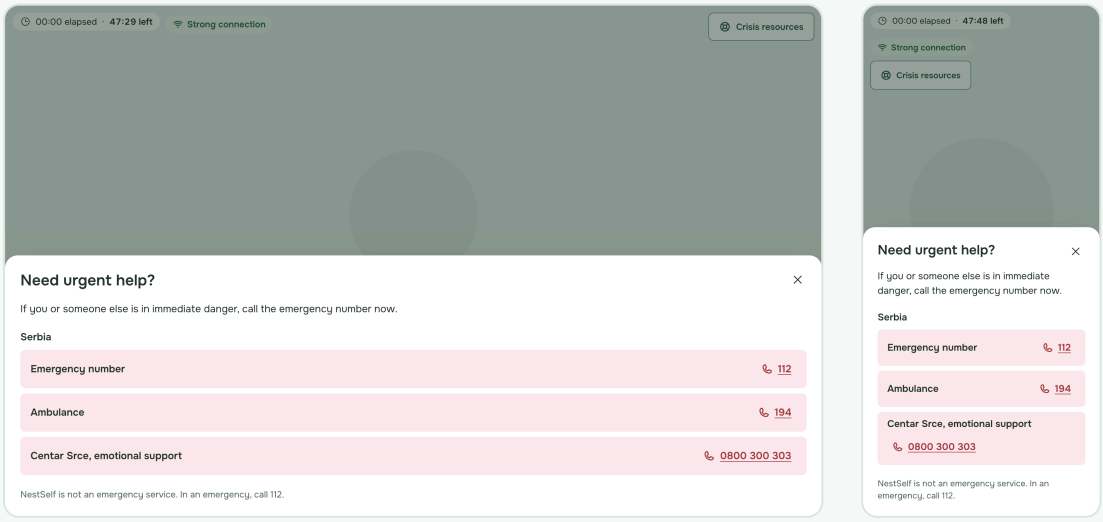

2.7

Crisis resources

Help is one tap away

Crisis resources stays at the top of the screen for the whole call. It opens “Need urgent help?” with “If you or someone else is in immediate danger, call the emergency number now.” The list is for Serbia: Emergency number 112, Ambulance 194, and Centar Srce, emotional support 0800 300 303. On a phone, each number can be called directly. The panel ends with “NestSelf is not an emergency service. In an emergency, call 112.”

Opening the panel does not leave or mute the call. Close it with the cross.

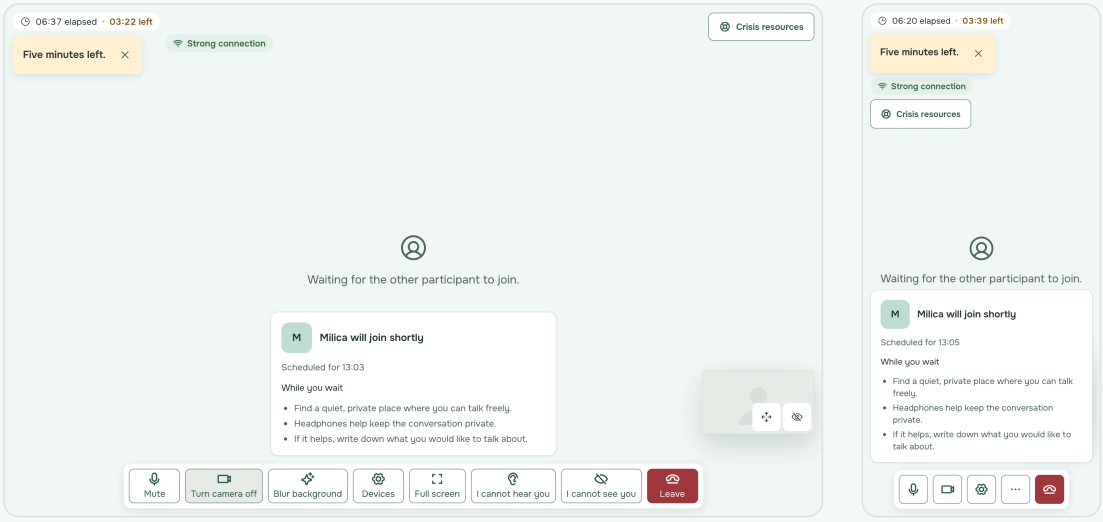

Employee · workspace app Crisis resources open over the running call. Screen 12, desktop and mobile

2.8

Time remaining and leaving

The five-minute cue

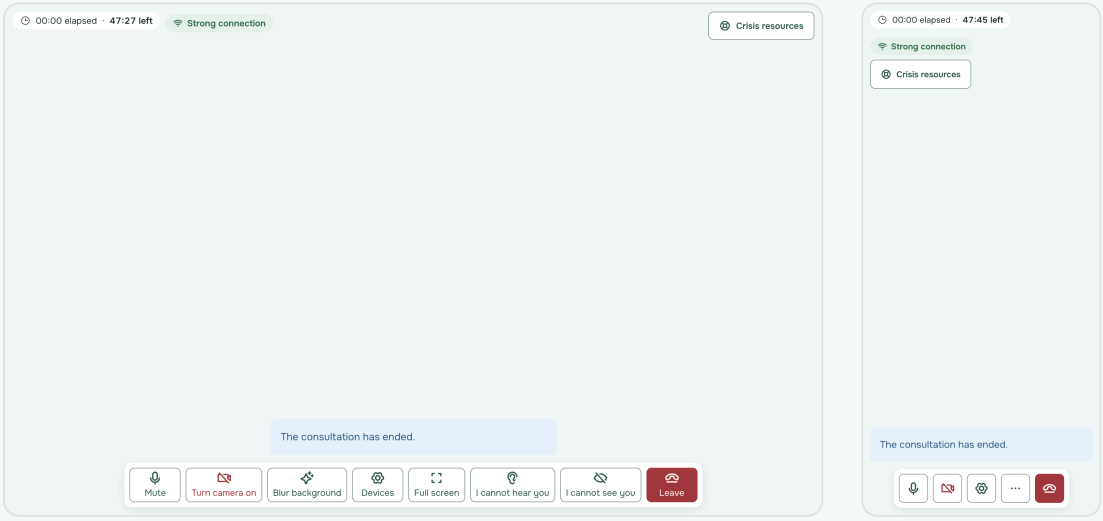

The timer shows the time elapsed and the time left. Five minutes before the end, “Five minutes left.” appears; dismiss it with the cross. At the scheduled end the timer says “Session time has ended.” Ten minutes later: “The room will close in 5 minutes.” The room closes 15 minutes after the scheduled end and the call stops for both of you.

Employee · workspace app The “Five minutes left.” cue beside the timer. Screen 13, desktop and mobile

When the session ends

When your expert ends the session, the stage says “The consultation has ended.” for five seconds, then the post-call screen opens. You can leave at any time with **Leave**; this does not end the session for your expert, and your screen then says “You left the consultation”.

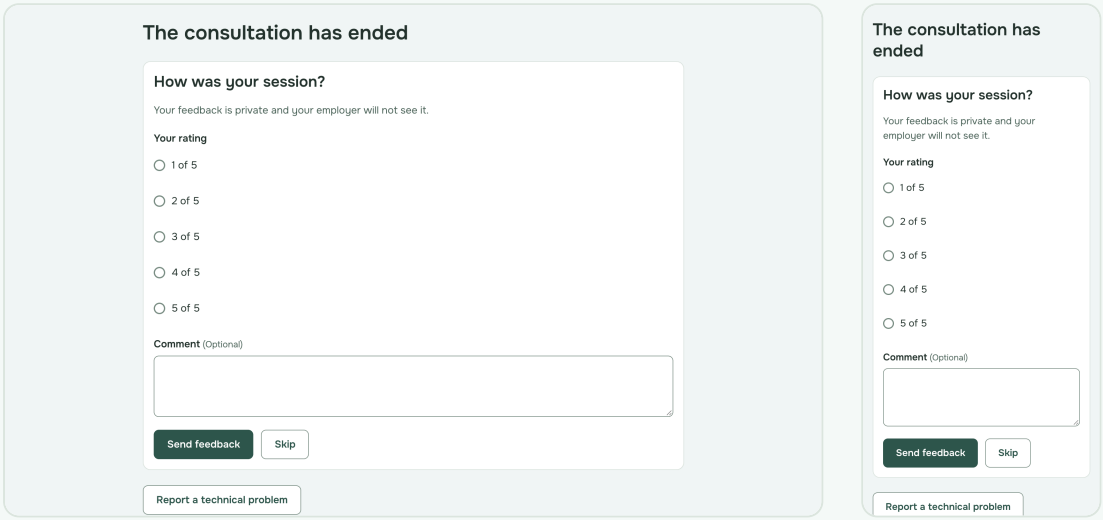

Employee · workspace app The expert ended the session: the notice before the post-call screen. Screen 18, desktop and mobile

2.9

After the call

Private feedback

The post-call screen asks “How was your session?” Choose a rating from 1 to 5 and add a comment if you like. The screen says “Your feedback is private and your employer will not see it.” Select **Send feedback**, or **Skip** to send nothing. NestSelf reads feedback only in aggregate.

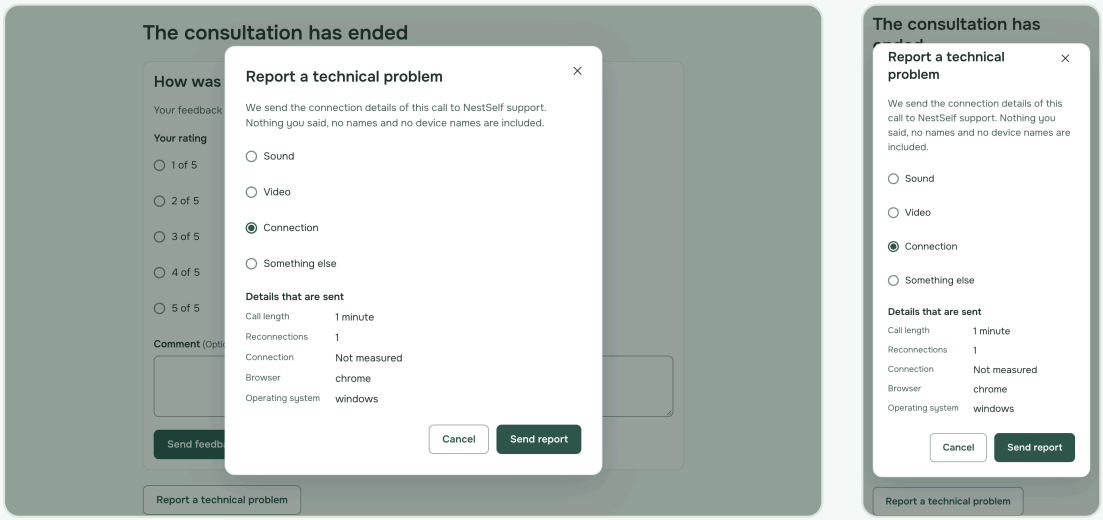

Employee · workspace app Post-call screen: rating, optional comment, Skip. Screen 19, desktop and mobile

Reporting a technical problem

If something went wrong, select **Report a technical problem**. Choose what went wrong (**Sound**, **Video**, **Connection** or **Something else**). Under “Details that are sent” the dialog lists exactly what is sent: call length, reconnections, connection quality, browser and operating system. “We send the connection details of this call to NestSelf support. Nothing you said, no names and no device names are included.”

After **Send report**: “Report sent. NestSelf support can now see the connection details of this call.”

Employee · workspace app The report dialog lists the details that are sent. Screen 20, desktop and mobile

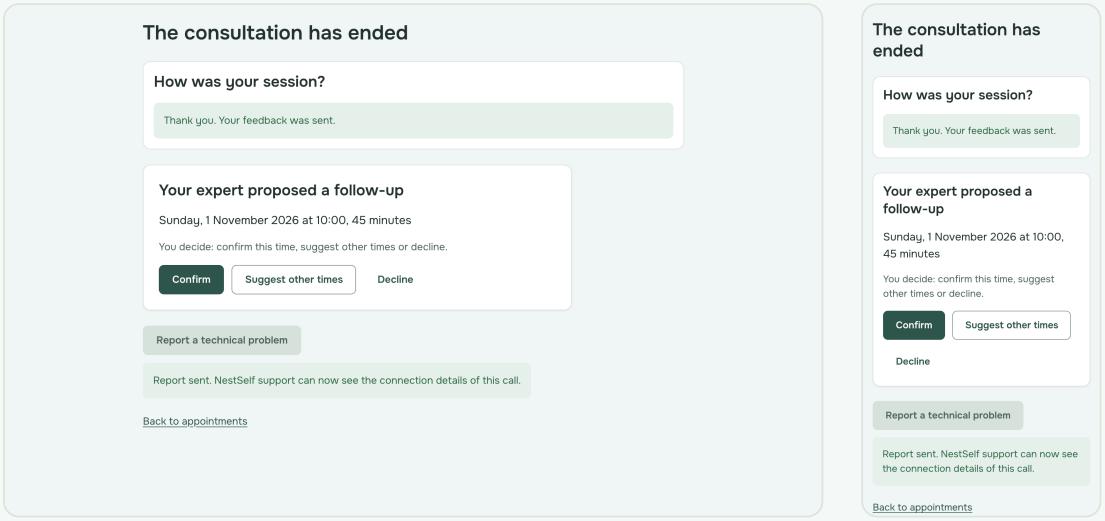

2.10

Follow-up proposals

After the call your expert can propose another session. It reaches you on the post-call screen, in an email titled “A follow-up was proposed” and on the appointment page and list, so you do not miss it if you already left. You decide.

A proposal arrives

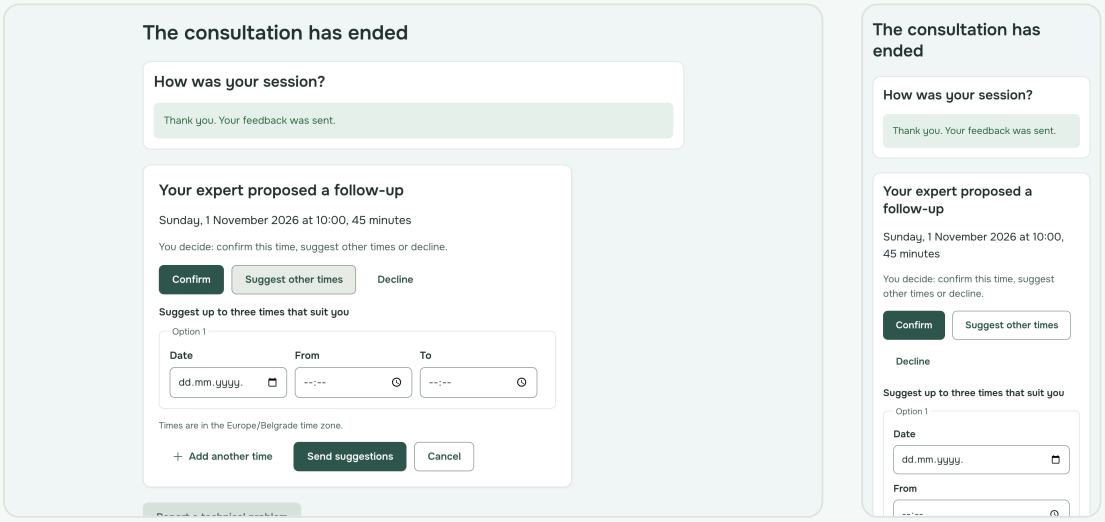

The card “Your expert proposed a follow-up” shows the date, the time and the length, and says “You decide: confirm this time, suggest other times or decline.” Choose **Confirm**, **Suggest other times** or **Decline**.

Employee · workspace app The proposal on the post-call screen. Screen 23, desktop and mobile

Suggesting other times

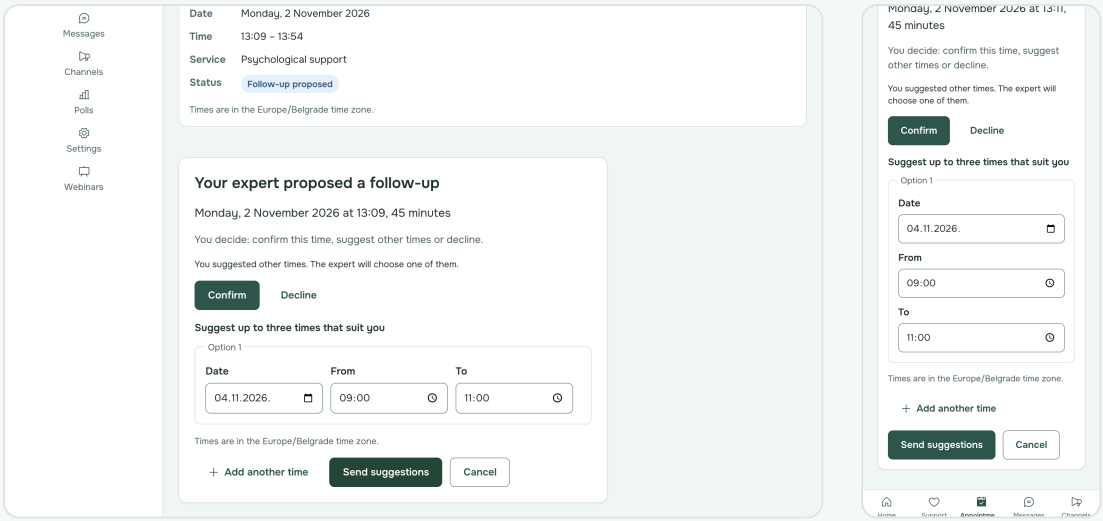

Suggest other times opens “Suggest up to three times that suit you”. Fill in a date with a start and an end (**From** and **To**); **Add another time** adds a second and a third option. Times are in the appointment's time zone. Select **Send suggestions**. A time in the past is refused with “Choose a time in the future.”

Employee · workspace app Up to three time windows in the appointment's time zone. Screen 24, desktop and mobile

After you suggested times

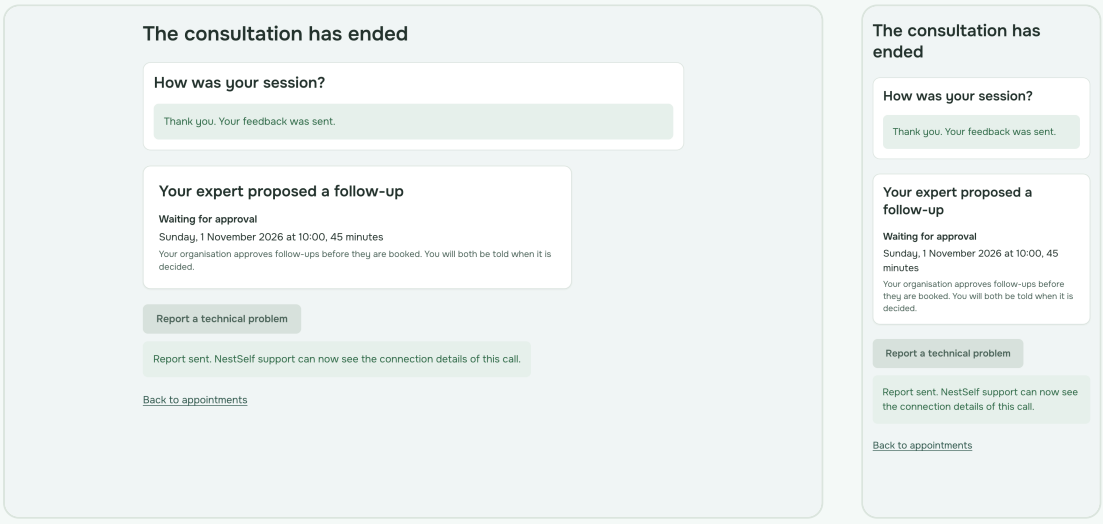

The card says “You suggested other times. The expert will choose one of them.” The status stays **Follow-up proposed** until the expert picks one; the session then starts at the beginning of the time chosen and keeps its length. After that it is booked, or it waits for approval, as below.

Employee · workspace app Other times sent from the appointment page. Screen 26, desktop and mobile

Confirming

What **Confirm** does depends on your organisation. If follow-ups need no approval, the session is booked at once: “Your follow-up is booked for DATE at HH:MM.” Reminders follow as for any appointment. If your organisation approves follow-ups first, the card shows “Waiting for approval” and “Your organisation approves follow-ups before they are booked. You will both be told when it is decided.”

Employee · workspace app Confirmed under an approval policy: waiting for approval. Screen 25, desktop and mobile

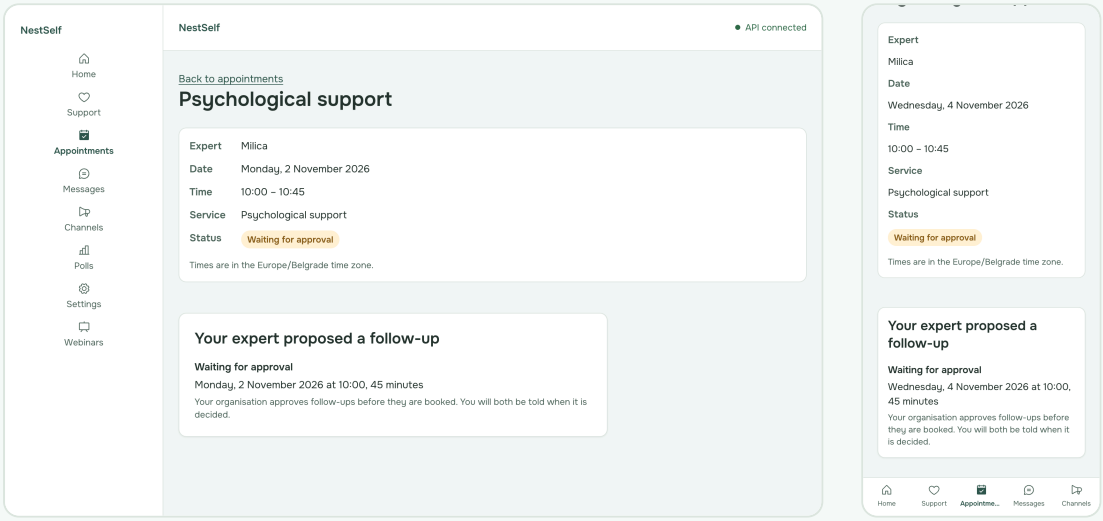

What “Waiting for approval” means

Some organisations ask an approver to agree before a follow-up is booked. The approver sees only your name, that it is a follow-up session with a NestSelf expert, the date and the length. They never see the service, the topic, your expert or anything said in the session.

- If nobody is assigned to approve for your team, confirming fails with “Your organisation has not assigned anyone to approve follow-ups yet. Contact your HR team.”
- If the approver does not decide in time, the request lapses: “The approval lapsed before the proposed time.”
- If the proposed time passes before you answer: “The proposed time has passed. Your expert can propose a new one.”

Waiting for the decision

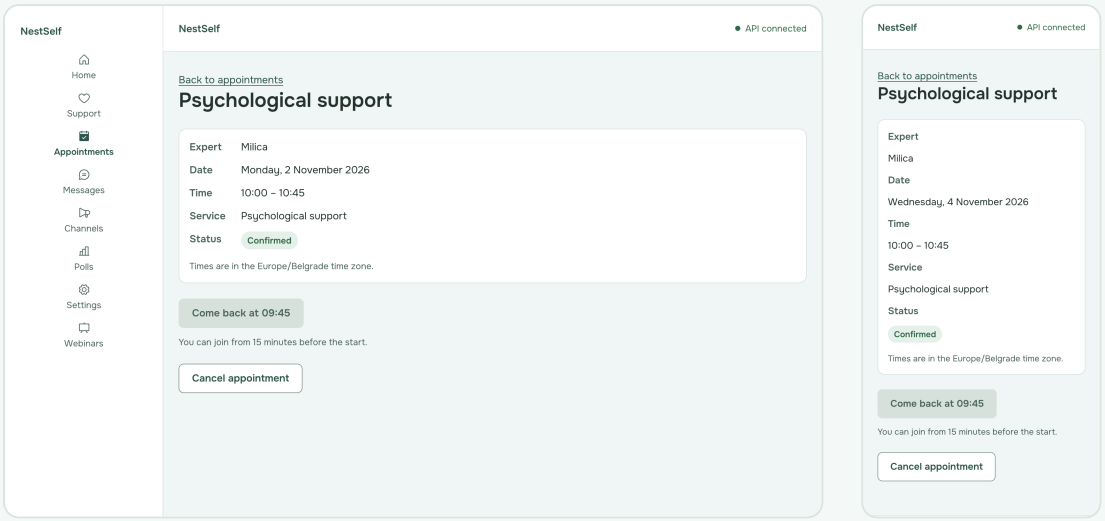

The appointment page shows the status **Waiting for approval** and the same sentence. You and your expert are both told when the approver decides.

Employee · workspace app The follow-up waits for the approver's decision. Screen 81, desktop and mobile

Approved

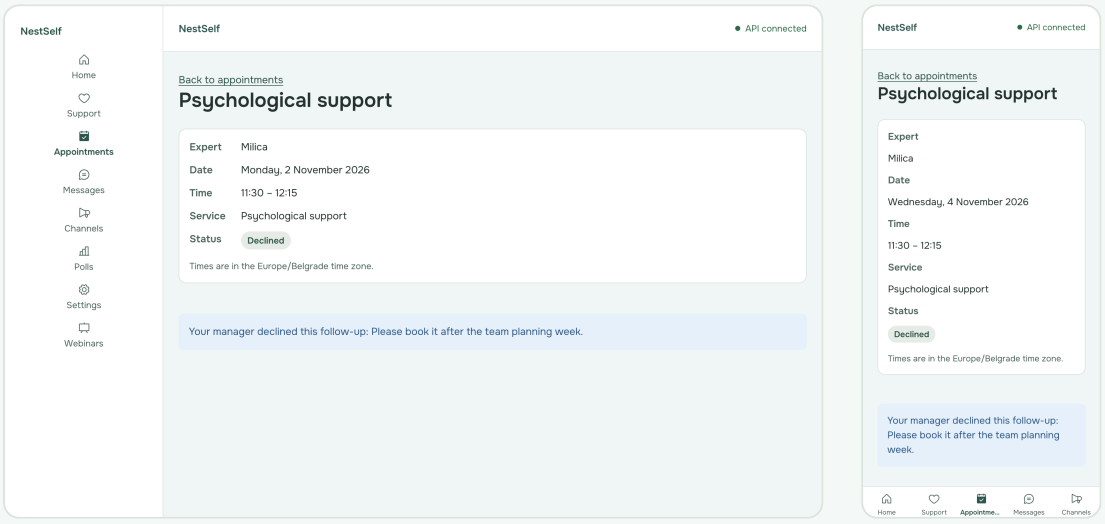

An approved follow-up is an ordinary **Confirmed** appointment: you join it like the first one, from 15 minutes before the start.

Employee · workspace app The approved follow-up is confirmed. Screen 84, desktop and mobile

Declined by the approver

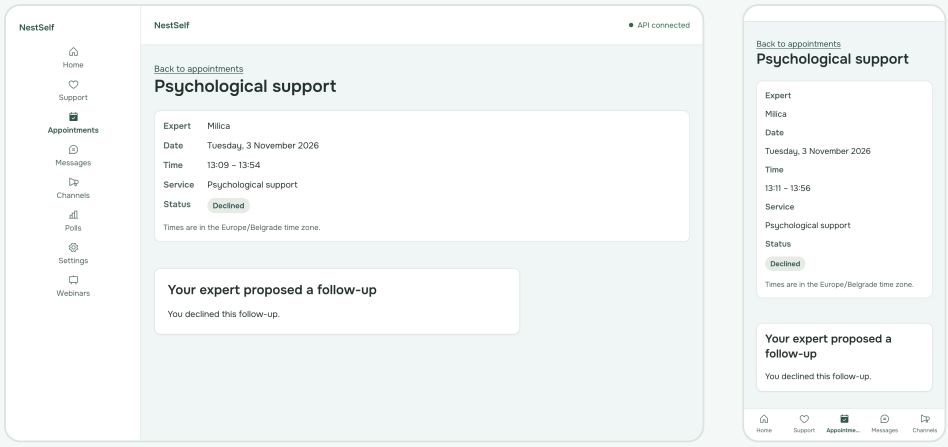

If the approver declines, the page shows their short reason: “Your manager declined this follow-up: Please book it after the team planning week.” Only you see the reason. Talk to your expert or HR if you still need the session.

Employee · workspace app Declined by the approver, with the reason only the employee sees. Screen 85, desktop and mobile

Declining yourself

Decline ends the proposal; the card says “You declined this follow-up.” Your expert is told and can propose another time.

Employee · workspace app The employee declined the proposal. Screen 27, desktop and mobile

2.11

What your employer can and cannot see

Your employer cannot see

- that you booked, joined or missed a consultation;
- its service or topic, its outcome or its length;
- your feedback, your technical reports or the location you shared;
- which webinars you registered for or attended, or what you wrote in them.

This applies to every employer account: owners, HR, managers and reporting users. The server refuses these records to them on every route; hiding a button is not what protects you.

What your employer can see

- If your organisation requires approval, the approver sees your name, “Follow-up session with a NestSelf expert”, the date and the length, and nothing else.
- Any number about calls or webinars shown to an employer in the future must count at least five people. No such number exists yet.
- Emails and calendar entries are neutral: “Your NestSelf session” or “Your NestSelf webinar”, with a private calendar entry.

CHAPTER 3

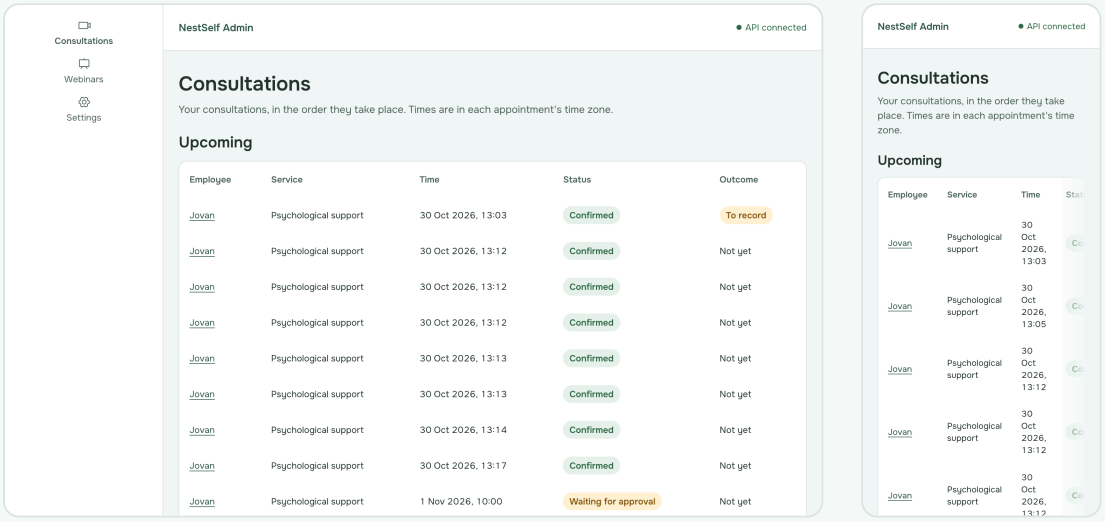

Experts: running a consultation

Admin app. Signed in as the sample expert, Milica Ristić.

You run consultations from the NestSelf admin app: you see your list, tell the employee if you are late, join, share your screen, end the session, record what happened and propose a follow-up. You see only the consultations you are assigned to.

Your consultations

Open **Consultations**. **Upcoming** comes first, then **Past**; you see only the consultations you are assigned to. The columns are **Employee** (first name only), **Service**, **Time** in each appointment's time zone, **Status** and **Outcome**: **Not yet**, **To record**, **Delivered**, **No-show** or **Not delivered**. Select the employee's name to open a consultation.

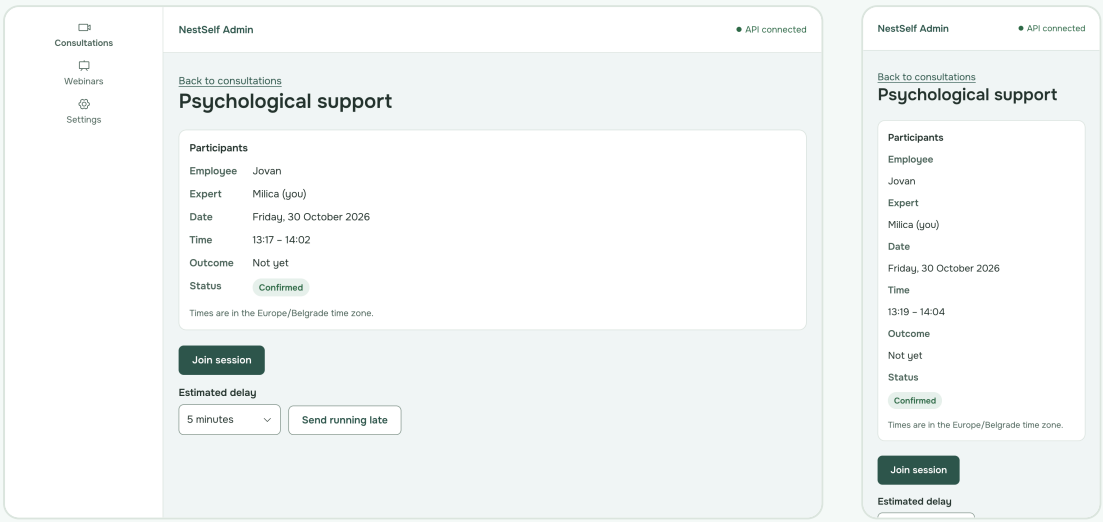

Expert · admin app The expert's consultations, upcoming first. Screen 14, desktop and mobile

Before you join: running late

The consultation page lists the participants, the date, the time, the outcome and the status. Inside the join window it offers **Join session** and, if you are delayed, **Estimated delay** with **Send running late**. The employee sees the delay in the waiting card, and you see “The employee was told that you are running late.”

Join session opens the same device check as the employee's: camera, microphone, speaker and connection, with camera off and blur. Joining is possible from 15 minutes before the start.

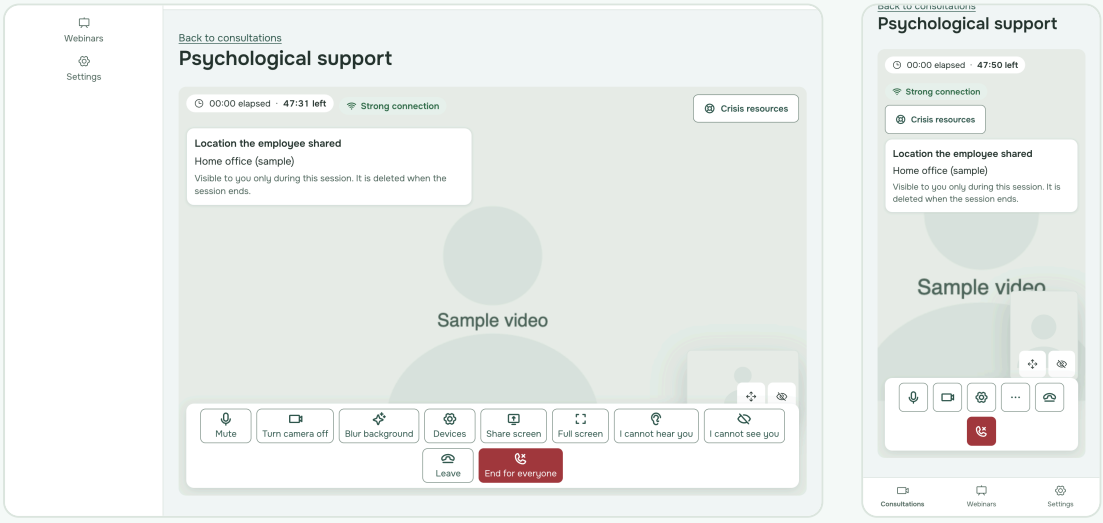

Expert · admin app Consultation detail inside the join window: Join and the running-late signal. Screen 15, desktop and mobile

Your call screen

Your call has the employee's controls plus two of your own: **Share screen** and **End for everyone**. While you share, you see “You are sharing your screen” and the employee sees your screen in the main view; **Stop sharing** ends it. Only you can share.

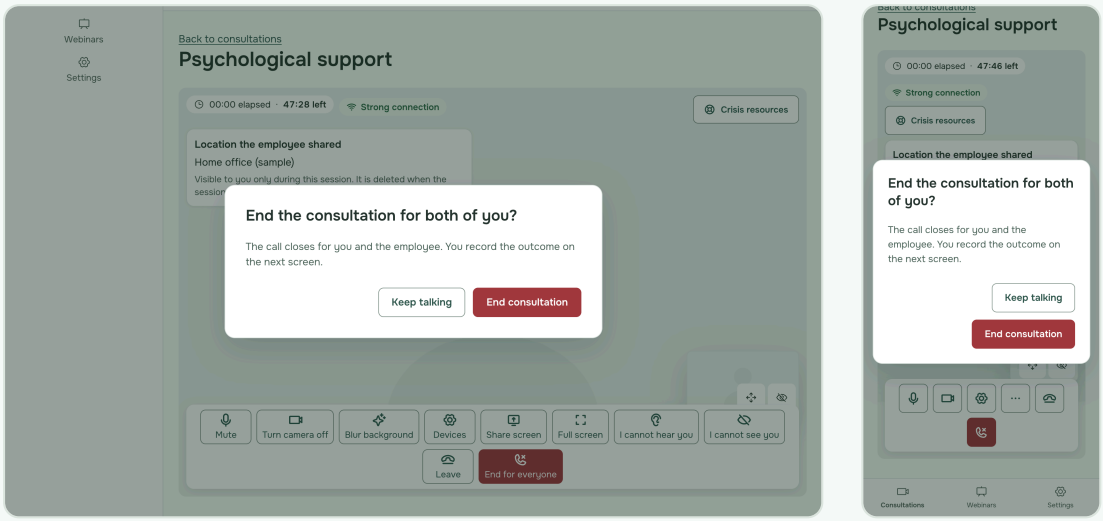

If the employee shared a location, the card “Location the employee shared” shows it, with “Visible to you only during this session. It is deleted when the session ends.” Otherwise it says “The employee has not shared a location.” Your **Crisis resources** adds “If the employee may be in danger”: stay in the call, ask where they are, and call 112 from another phone. Your five-minute cue adds “You can propose a follow-up on the screen after the call.”

Expert · admin app The expert's call: shared location, screen sharing, End for everyone. Screen 16, desktop and mobile

Ending for everyone

End for everyone asks “End the consultation for both of you?” “The call closes for you and the employee. You record the outcome on the next screen.” Choose **Keep talking** or **End consultation**. The call closes for both of you, and the outcome form opens.

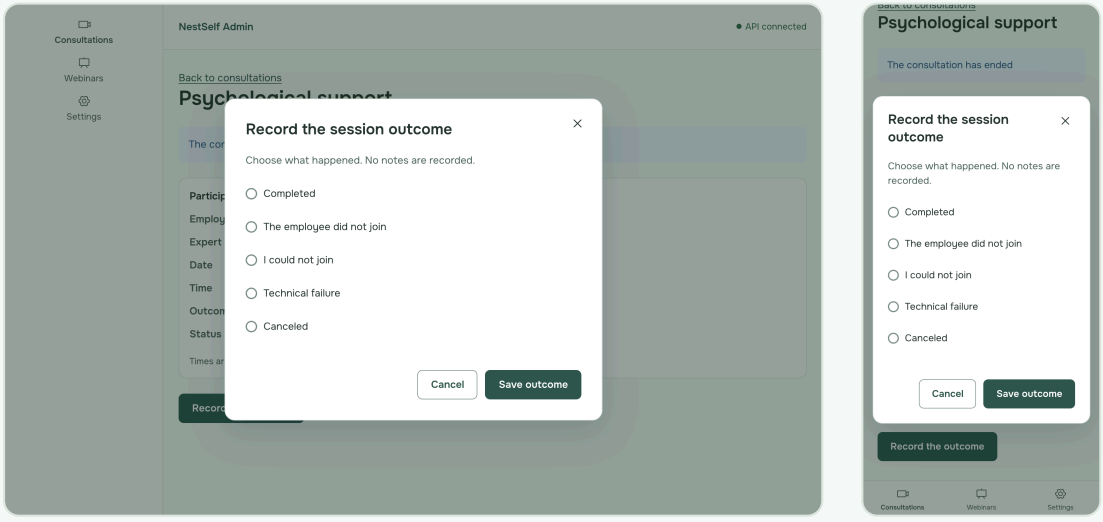

Expert · admin app The confirmation before the call closes for both. Screen 17, desktop and mobile

Recording the outcome

“Record the session outcome” asks for one choice: **Completed**, **The employee did not join**, **I could not join**, **Technical failure** or **Canceled**. Select **Save outcome**. If you closed the form, **Record the outcome** on the page opens it again.

There is no notes field, by design: “Choose what happened. No notes are recorded.” NestSelf does not store professional notes, and the server refuses a note if one is sent. Only the delivery status and the connection data are kept.

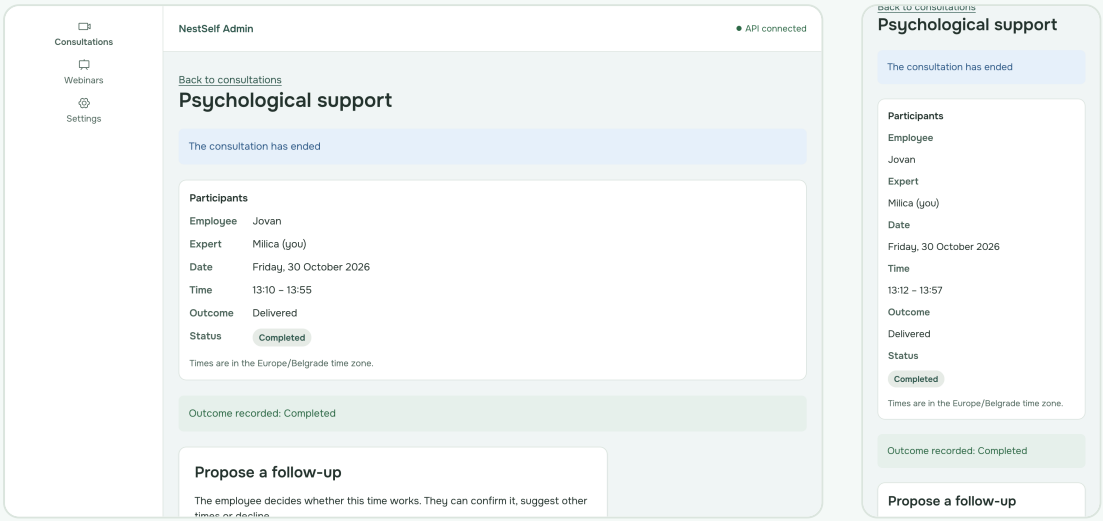

Expert · admin app The outcome dialog: five statuses, no notes. Screen 21, desktop and mobile

Proposing a follow-up

Once the outcome is **Completed**, the card “Propose a follow-up” appears. Pick the **Date**, the **Time** and the **Duration** (the same as this session unless you change it); times are in the appointment's time zone. The card says “The employee decides whether this time works. They can confirm it, suggest other times or decline.” There is no free text. Select **Send proposal**.

The card then shows “Waiting for the employee to answer.” If the organisation approves follow-ups, you see “The employee's organisation approves follow-ups before they are booked. You will both be told when it is decided.” If the employee declines, a notice says “The employee declined your follow-up proposal.” and the card offers a new proposal.

Expert · admin app The follow-up card after a completed outcome. Screen 22, desktop and mobile

Picking a time the employee suggested

If the employee suggests other times, open the follow-up with **Open the follow-up**. The page says “The employee suggested other times” and “Choose one of them. The session starts at the beginning of the time you choose and keeps its length.” Choose one under **Suggested times** and select **Schedule**; the page then says “Scheduled for DATE at HH:MM.” From there the follow-up is booked or goes to approval, as when the employee confirms. This edition has no screenshot of this screen.

A follow-up is refused when the session was not completed, another follow-up is already open or the time has passed: “A follow-up is not possible here: the session was not completed, another follow-up is already open, or the proposed time has passed.”

CHAPTER 4

HR and approvers: follow-up approval

Workspace app, employer space. Signed in as the sample HR administrator and approver, Ivana Jovanović.

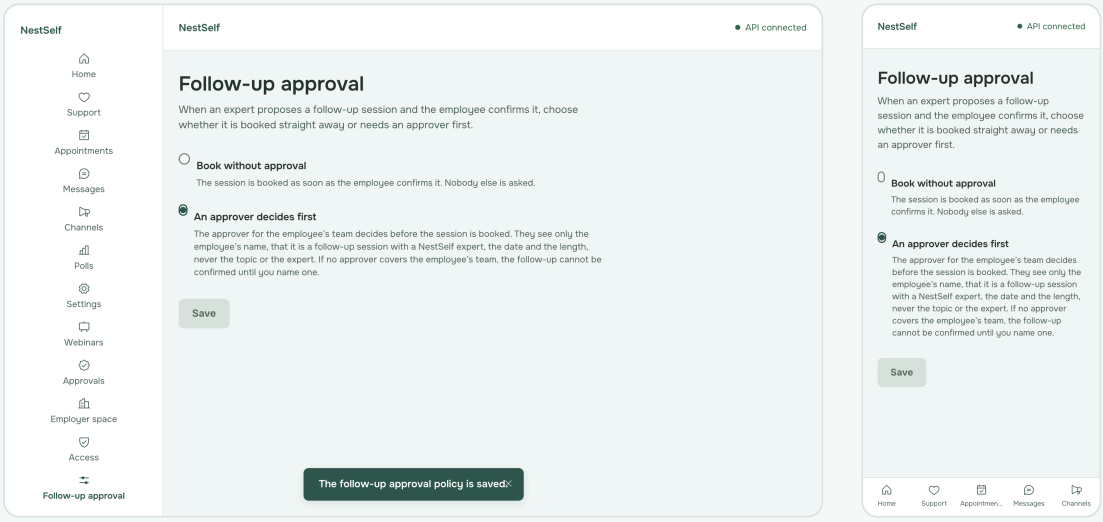

An organisation can ask for approval before a follow-up session is booked. HR sets the policy once; the approver for the employee's team then decides each request, seeing four facts and nothing about the content.

The follow-up approval policy

HR administrators open **Follow-up approval** in the employer space. “When an expert proposes a follow-up session and the employee confirms it, choose whether it is booked straight away or needs an approver first.” Two choices:

- **Book without approval**: “The session is booked as soon as the employee confirms it. Nobody else is asked.” This is the default.
- **An approver decides first**: “The approver for the employee’s team decides before the session is booked. They see only the employee’s name, that it is a follow-up session with a NestSelf expert, the date and the length, never the topic or the expert. If no approver covers the employee’s team, the follow-up cannot be confirmed until you name one.”

Select **Save**; the app confirms “The follow-up approval policy is saved.”

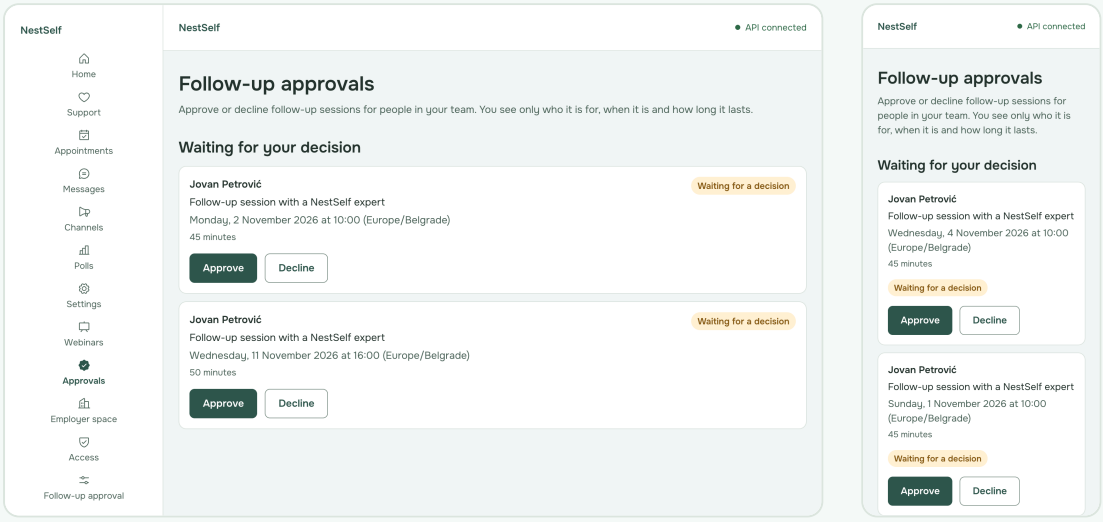

HR and approver · workspace app The policy with “An approver decides first” selected. Screen 80, desktop and mobile

Workspace app, employer space. Signed in as the sample HR administrator and approver, Ivana Jovanović.

The approvals list

Approvers open **Approvals**. “Approve or decline follow-up sessions for people in your team. You see only who it is for, when it is and how long it lasts.” Under **Waiting for your decision** each request shows four facts: the employee's name, “Follow-up session with a NestSelf expert”, the date and time with the time zone, and the length. Select **Approve** or **Decline**. An approval tells both sides: “Follow-up approved. Jovan Petrović and the expert are told.”

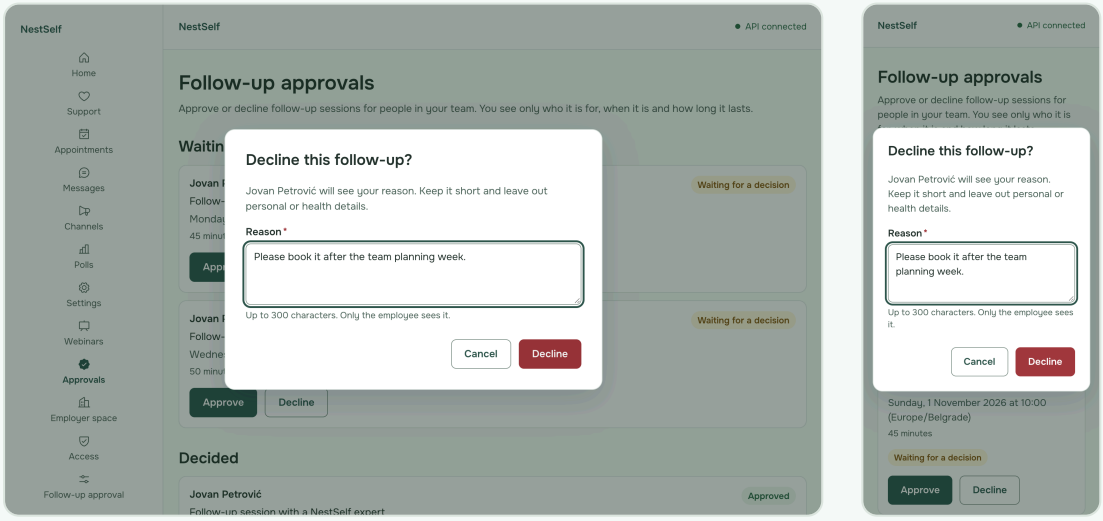

Earlier requests move to **Decided** with **Approved**, **Not approved** or **Expired**.

HR and approver · workspace app Two requests waiting for a decision. Screen 82, desktop and mobile

Declining with a reason

Decline opens “Decline this follow-up?” with “Jovan Petrović will see your reason. Keep it short and leave out personal or health details.” The **Reason** is required: “Up to 300 characters. Only the employee sees it.” An empty reason shows “Write a short reason.” After **Decline**: “Follow-up declined. Jovan Petrović will see your reason.”

HR and approver · workspace app The decline dialog asks for a short reason. Screen 83, desktop and mobile

What an approver sees, and never sees

- Sees: the employee's name, “Follow-up session with a NestSelf expert”, the date and time, the length.
- Never sees: the service or topic, the expert's name or specialty, the outcome, feedback or anything said in a session.
- Nobody decides their own follow-up: “You cannot decide your own follow-up. Your alternate approver can decide it.”
- The alternate approver receives the same emails and can decide too.

When nobody decides: lapse rules

- The request email goes to the approver and the alternate.
- After 5 working days without a decision, both receive a reminder. Working days are Monday to Friday in Belgrade time; public holidays are not taken into account.
- The request lapses at the earlier of the proposed start and 10 working days after the request. It becomes Expired, the follow-up is declined, and the employee is told.
- A decision after the lapse is refused: “This request has already been decided or has expired.”
- No reminder is sent when it would arrive after the lapse.

CHAPTER 5

Webinars for employees

Workspace app. Signed in as the sample employee, Jovan Petrović.

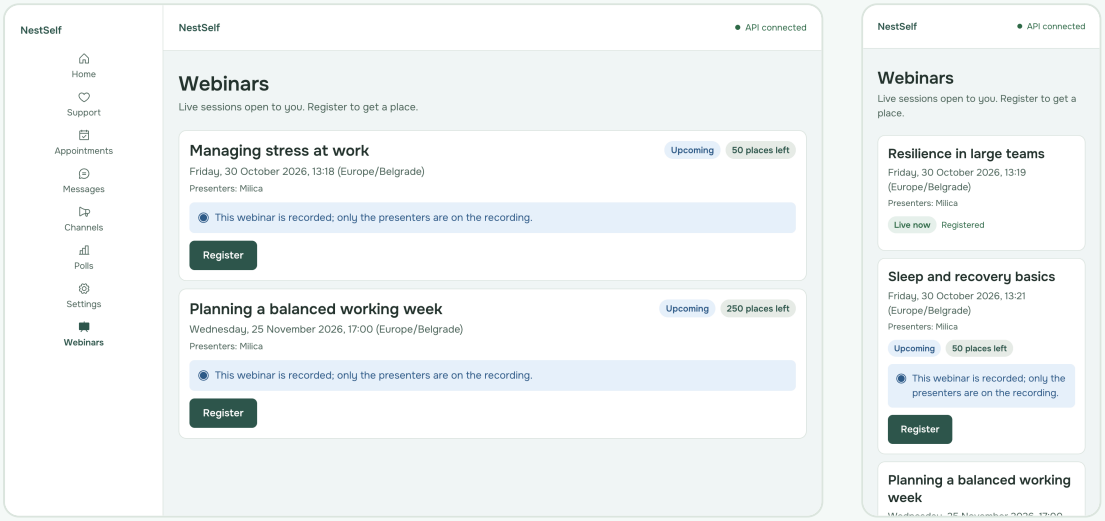

Webinars are live talks by NestSelf experts for employees of client companies. You watch and listen and are never on camera. Every webinar is recorded, and only the presenters are on the recording; your voice is recorded only if a host gives you the floor and you unmute.

5.1

Finding and registering

Webinars open to you

Open **Webinars**: “Live sessions open to you. Register to get a place.” You see only the webinars your organisation's audience includes. Each shows the title, the date and time with the time zone, the presenters, **Upcoming**, the places left, and beside **Register** the notice “This webinar is recorded; only the presenters are on the recording.”

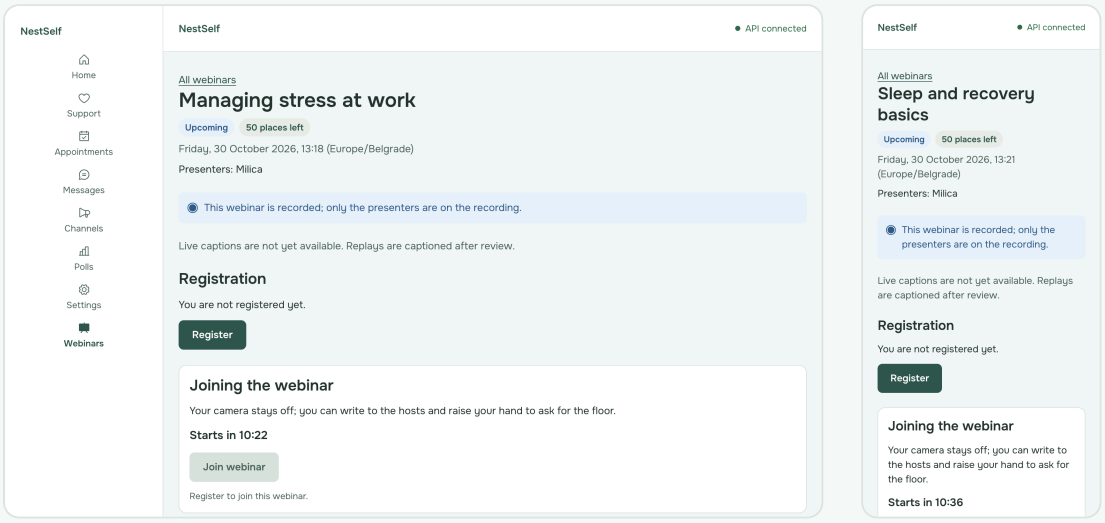

Employee · workspace app Webinar discovery with places left and the recording notice. Screen 60, desktop and mobile

The webinar page

The page repeats the recording notice and adds “Live captions are not yet available. Replays are captioned after review.” Under **Registration** it says “You are not registered yet.” Select **Register**. A full webinar says “This webinar is full.”

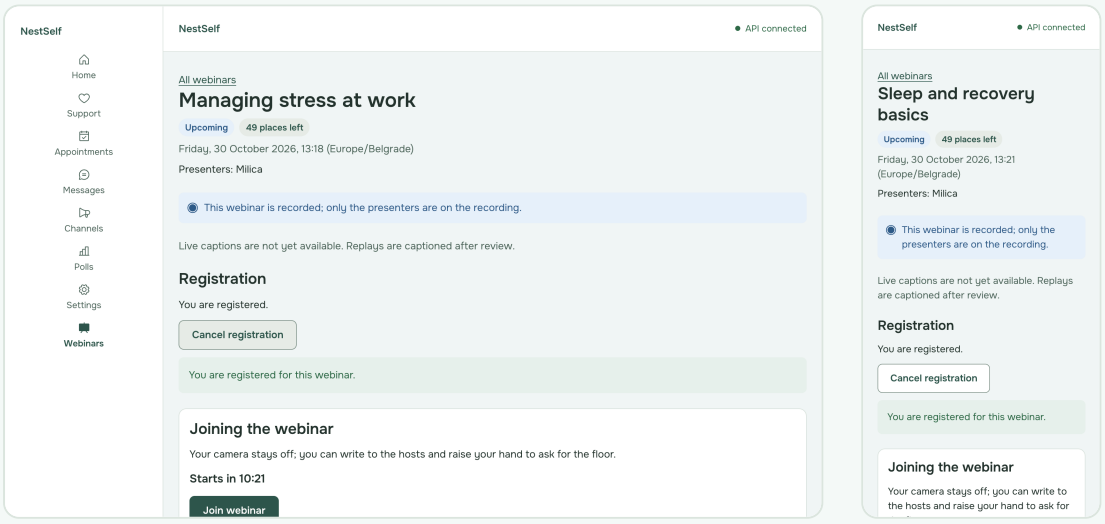

You receive a confirmation email titled “Your NestSelf webinar”; it repeats that the webinar is recorded and only the presenters are on the recording, and adds a private calendar entry. Reminders follow 24 hours and 1 hour before.

Employee · workspace app Webinar detail before registering. Screen 61, desktop and mobile

Registered

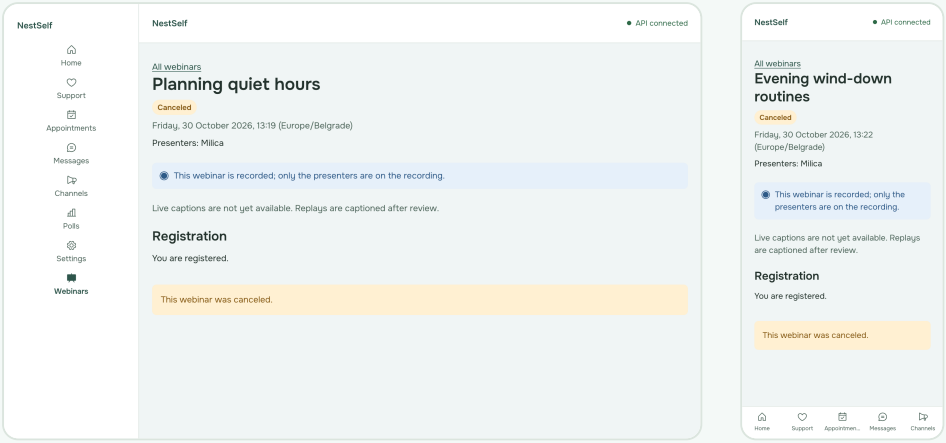

The page says “You are registered for this webinar.” **Cancel registration** gives your place back until the webinar starts. Under **Joining the webinar**: “Your camera stays off; you can write to the hosts and raise your hand to ask for the floor.”, a countdown, and **Join webinar**, which opens 15 minutes before the start (“You can join from HH:MM.”).

Employee · workspace app Registered: the countdown and Join webinar. Screen 62, desktop and mobile

If a webinar is canceled

Registered employees receive a cancellation email, and the webinar page says “This webinar was canceled.” There is nothing to join, and the webinar cannot be registered for again.

Employee · workspace app A canceled webinar as the employee sees it. Screen 87, desktop and mobile

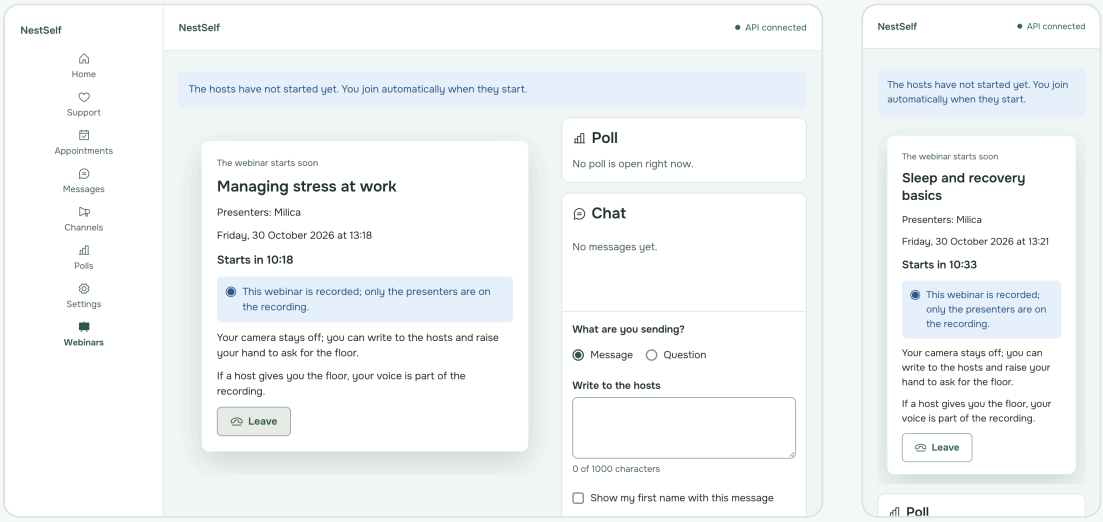

5.2

The lobby and the live webinar

The lobby

Join webinar first asks you to “Check your sound”: “Attendees listen and watch. Your camera stays off, and your microphone stays off unless a host gives you the floor.” Then the lobby says “The hosts have not started yet. You join automatically when they start.” The card shows the title, the presenters, the start and a countdown, the recording notice, “Your camera stays off; you can write to the hosts and raise your hand to ask for the floor.” and “If a host gives you the floor, your voice is part of the recording.”

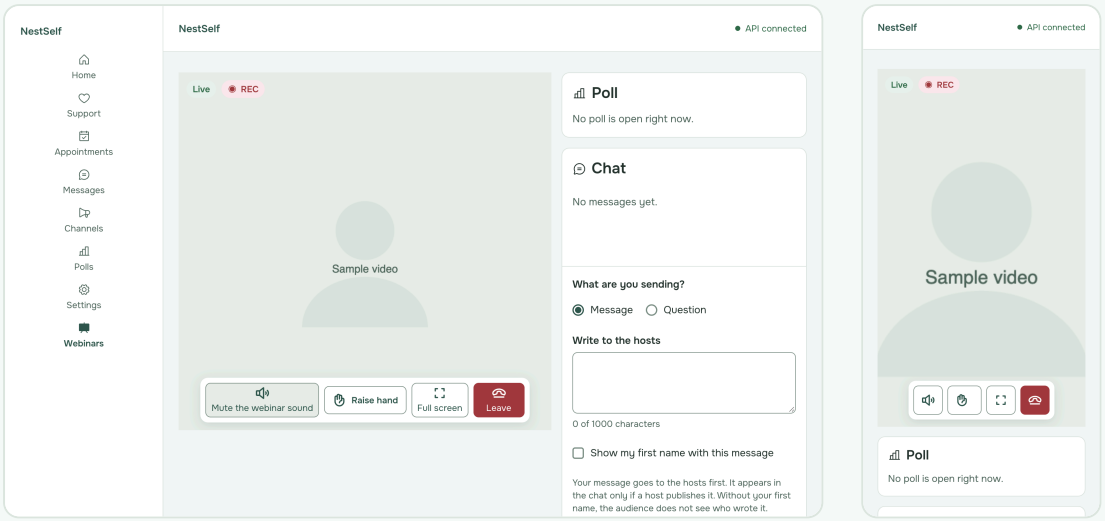

Nobody sees who else is waiting, and you can already write to the hosts.

Employee · workspace app The lobby before the hosts start. Screen 63, desktop and mobile

The live stage

You see the presenter's video and any shared screen, with **Live** and **REC**. Your controls: **Mute the webinar sound**, **Raise hand**, **Full screen** and **Leave**. There is no camera button and no list of who else is there. When you leave, nobody else is told.

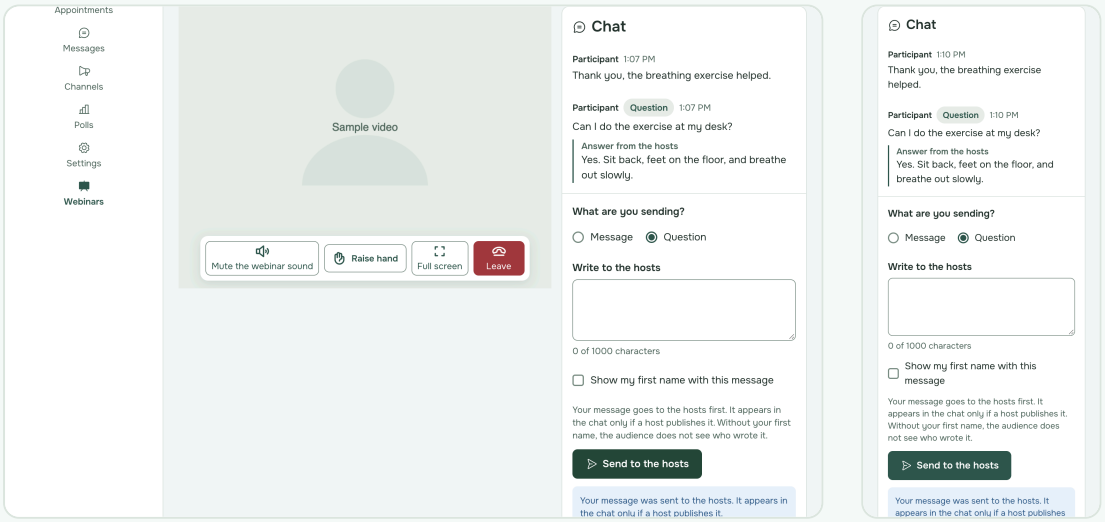

Employee · workspace app The attendee's live view: no camera, no list of attendees. Screen 64, desktop and mobile

Chat and questions

In **Chat**, choose **Message** or **Question** under “What are you sending?”, write under **Write to the hosts** (up to 1,000 characters) and select **Send to the hosts**. “Your message was sent to the hosts. It appears in the chat only if a host publishes it.”

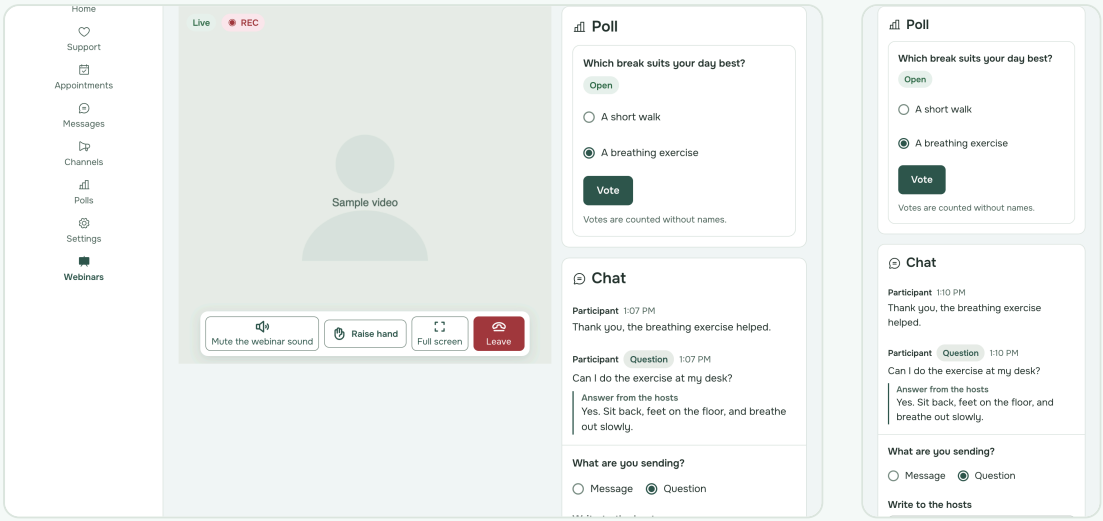

Your message is anonymous to the audience by default. Tick **Show my first name with this message** to add your first name: “Without your first name, the audience does not see who wrote it.” The moderator always sees your registered name. Published messages show as **Participant** or your first name; hosts' messages as **Host**; answers under “Answer from the hosts”.

Employee · workspace app The chat with a published message and an answered question. Screen 66, desktop and mobile

Polls

When the moderator opens a poll, the **Poll** panel shows the question and the options. Choose one and select **Vote**: “Thank you, your vote was counted. The results appear when the poll closes.” “Votes are counted without names.” When the poll closes, the results appear as percentages.

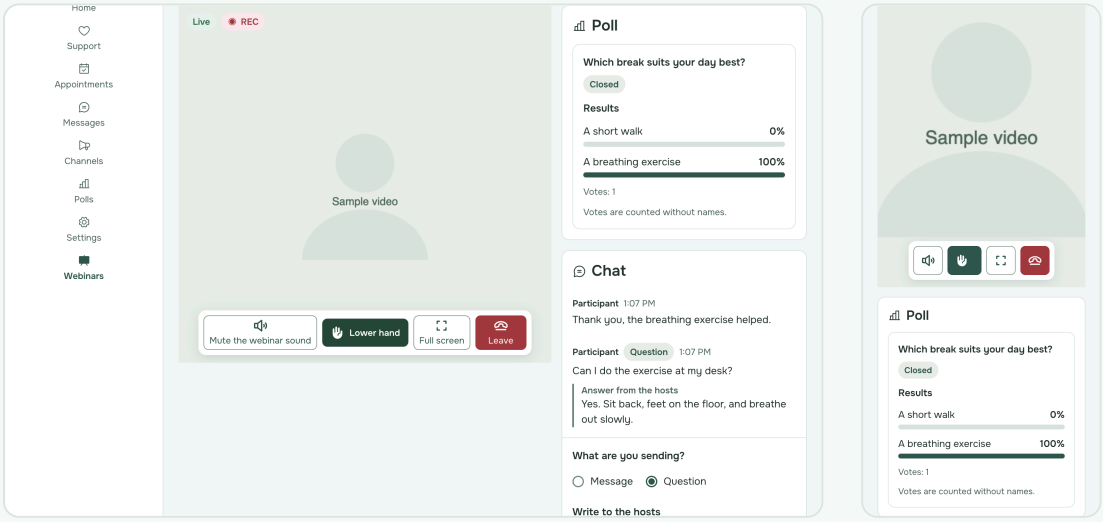

Employee · workspace app An open poll; votes are counted without names. Screen 67, desktop and mobile

5.3

Asking for the floor

Raising your hand

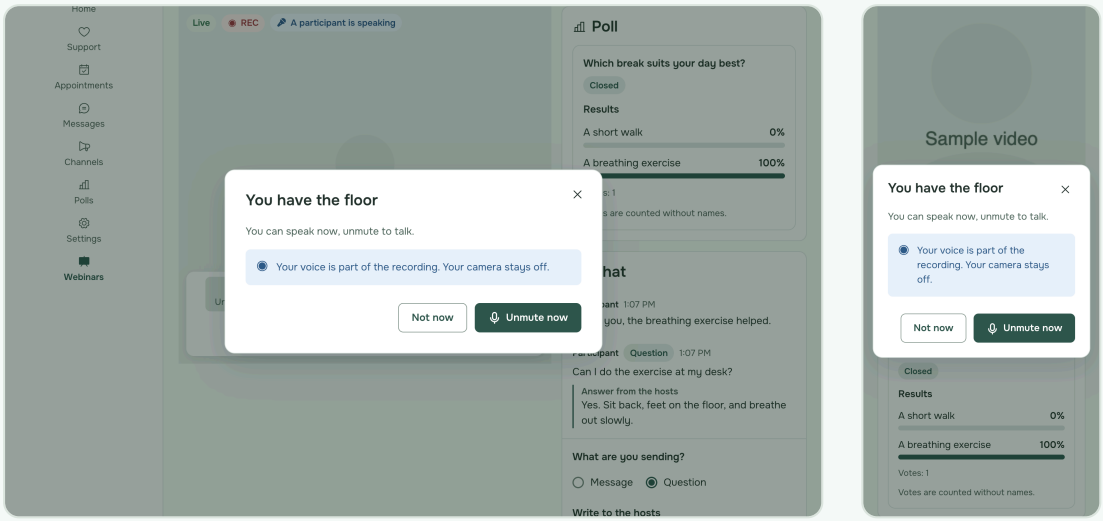

Raise hand tells the hosts you would like to speak: “Your hand is raised. A host can give you the floor.” **Lower hand** takes it back. The moderator sees your name; the presenter sees only “A participant asked to speak”.

Employee · workspace app The hand is raised; the button now reads Lower hand. Screen 65, desktop and mobile

Being given the floor

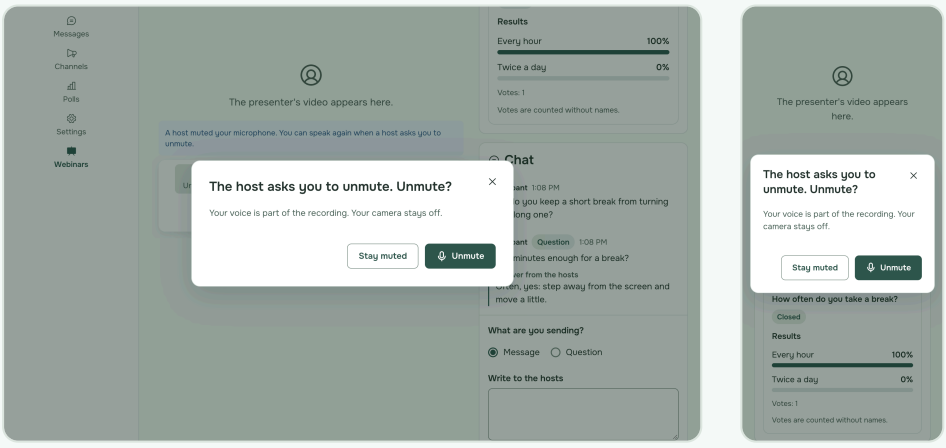

If a host gives you the floor, a dialog opens: “You have the floor”, “You can speak now, unmute to talk.” and “Your voice is part of the recording. Your camera stays off.” Your microphone stays off until you choose **Unmute now**; **Not now** keeps it off. Others see “A participant is speaking”. Your camera never turns on.

Employee · workspace app The floor dialog with the recording sentence. Screen 68, desktop and mobile

Muted by a host, and asked to unmute

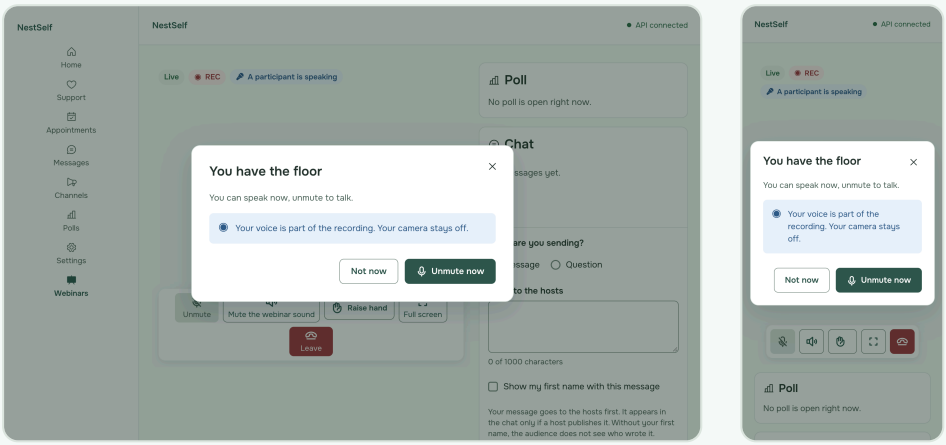

While you have the floor, a host can mute you: “A host muted your microphone. You can speak again when a host asks you to unmute.” A host can then ask you to speak again. The question “The host asks you to unmute. Unmute?” offers **Unmute** and **Stay muted**; nobody can unmute you but you. When the host takes the floor back: “The host took the floor back. Your microphone is off again.”

Employee · workspace app The host muted the attendee, then asked: Unmute or Stay muted. Screen 78, desktop and mobile

The floor in a large webinar

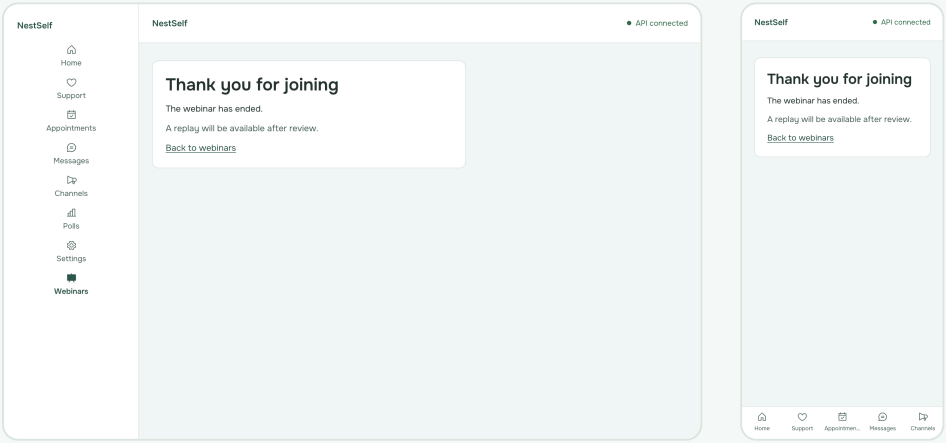

Above 250 attendees, the audience is spread over linked meetings that receive only the presenters. When a host gives the floor to an attendee in one of them, the app joins that attendee's microphone to the presenters' meeting for the turn, sound only, and takes it out again when a host mutes them or takes the floor back. The dialog and the controls are the same as above. Whether the sound stays stable in long turns is not measured yet (chapter 9).

Employee · workspace app The floor given to an attendee of a linked audience meeting. Screen 88, desktop and mobile

After the webinar

When the hosts end the webinar you see “Thank you for joining”, “The webinar has ended.” and “A replay will be available after review.” The recording goes to NestSelf's content team for review before anyone can watch it.

Employee · workspace app The end screen after the moderator ended the webinar. Screen 69, desktop and mobile

CHAPTER 6

Presenters and moderators

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

Webinars are created, published and run in the admin app. Operations prepare the occurrence; the presenters speak; the moderator reviews messages, gives the floor, runs polls and can stop the recording.

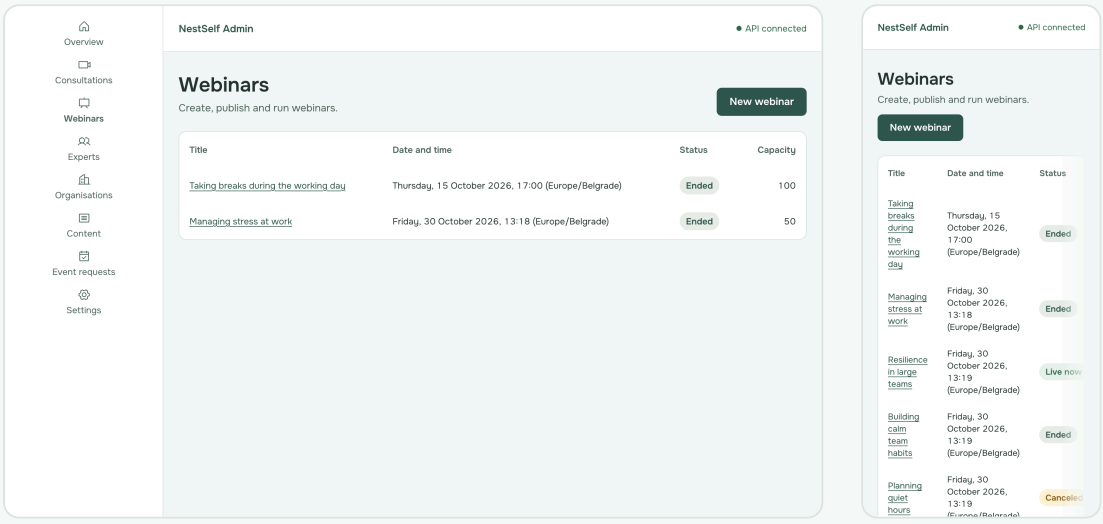

6.1

Creating and publishing a webinar

Operations create and publish webinars. Presenters are NestSelf experts; the moderator, from NestSelf operations, runs the room.

The webinar list

Open **Webinars**: “Create, publish and run webinars.” The list shows **Title**, **Date and time**, **Status** (**Draft**, **Upcoming**, **Live now**, **Ended** or **Canceled**) and **Capacity**. Select **New webinar** to create one.

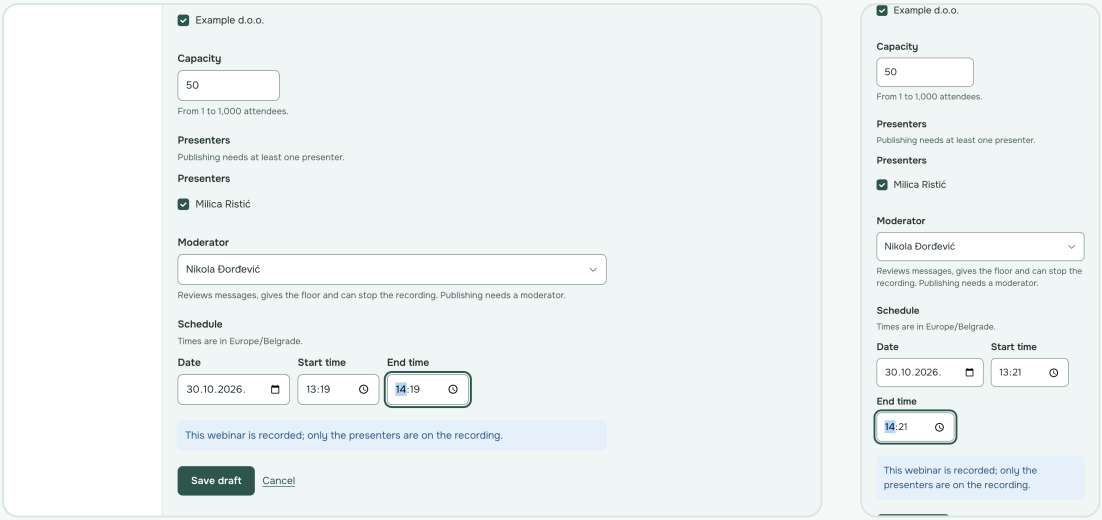

Operations, moderator · admin app The admin webinar list with New webinar. Screen 70, desktop and mobile

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

A new webinar

Fill in the **Title** in at least one language, an optional **Description**, and the **Audience**: **Every eligible organisation**, **Selected organisations** or **Units of one organisation**. **Capacity** takes “From 1 to 1,000 attendees.” Tick the **Presenters** and choose the **Moderator**: “Reviews messages, gives the floor and can stop the recording. Publishing needs a moderator.” Set the date, start and end in Europe/Belgrade time.

There is no recording switch: the form states that the webinar is recorded. Select **Save draft**: “The draft is saved. Publish it when it is ready.”

Operations, moderator · admin app The new-webinar form, with the recording notice and no switch. Screen 71, desktop and mobile

How many people can attend

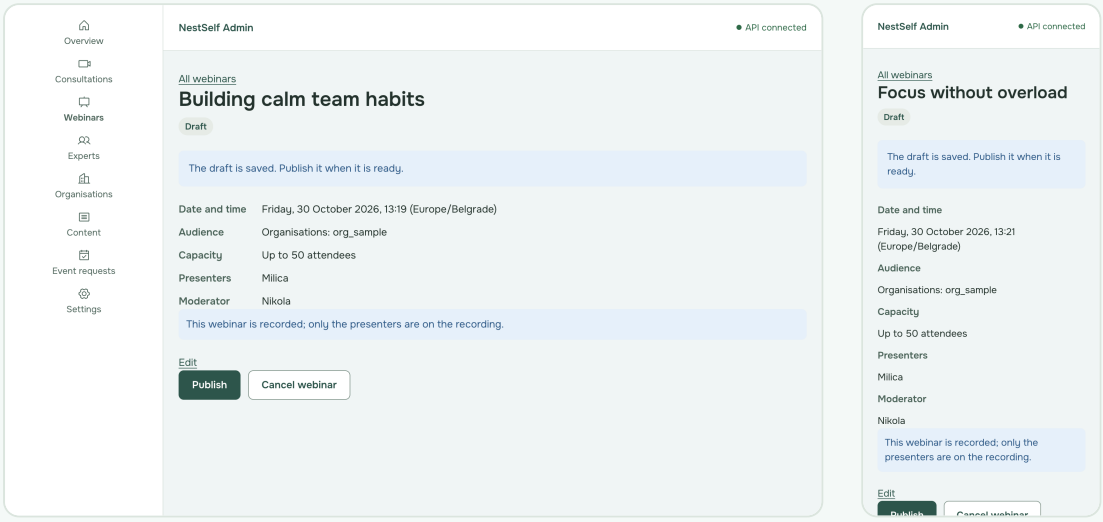

Up to 250 attendees share one meeting. For a larger audience, up to 1,000, the platform adds linked audience meetings that receive only the presenters; attendees see no difference, and the chat, polls and attendance work across them. Each attendee's place is reserved when they register.

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

Publishing, editing and canceling

The draft page lists the facts. **Publish** asks “Publish this webinar?” “Eligible employees can see it and register.” Publishing needs: “Before publishing, add at least one presenter and a moderator, set a start in the future and choose an audience.”

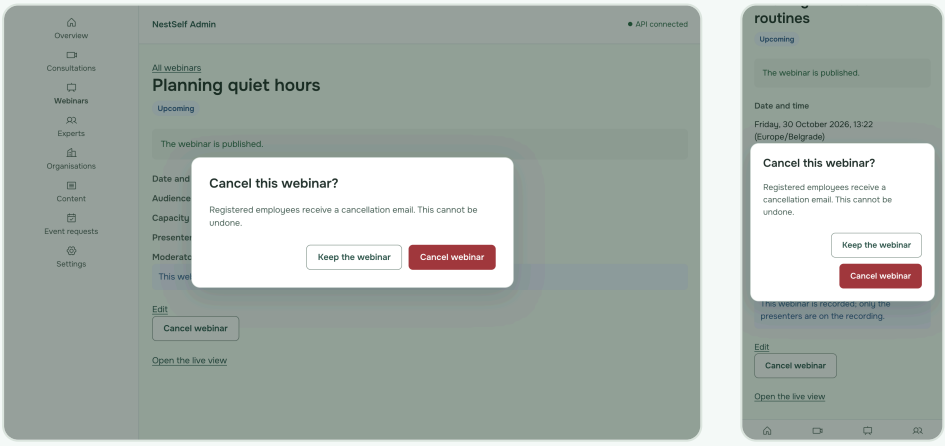

Publishing makes the webinar visible to the eligible employees of its audience, who can then register: “The webinar is published.”

Operations, moderator · admin app The saved draft with Publish and Cancel webinar. Screen 72, desktop and mobile

Canceling a webinar

Cancel webinar asks “Cancel this webinar?” “Registered employees receive a cancellation email. This cannot be undone.” Choose **Keep the webinar** to go back, or confirm: “The webinar is canceled.” Reminders stop, and registering is no longer possible.

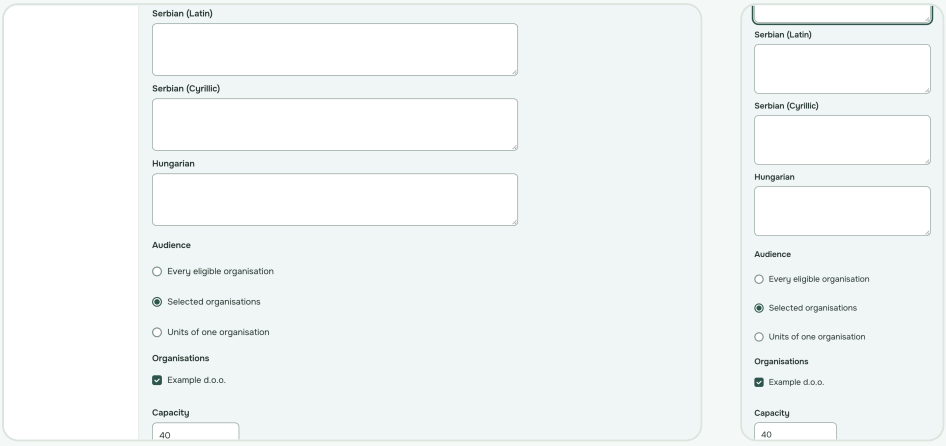

Operations, moderator · admin app The confirmation before a webinar is canceled. Screen 86, desktop and mobile

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

Editing a webinar

Edit opens “Edit webinar”, the same form filled in, while the webinar is a draft or upcoming. “The audience can be changed only while the webinar is a draft.” Select **Save changes**; the page confirms “Changes saved.” A webinar that is live, ended or canceled cannot be changed: “This webinar can no longer be changed in its current status.”

Operations, moderator · admin app Editing the draft: the same form with Save changes. Screen 76, desktop and mobile

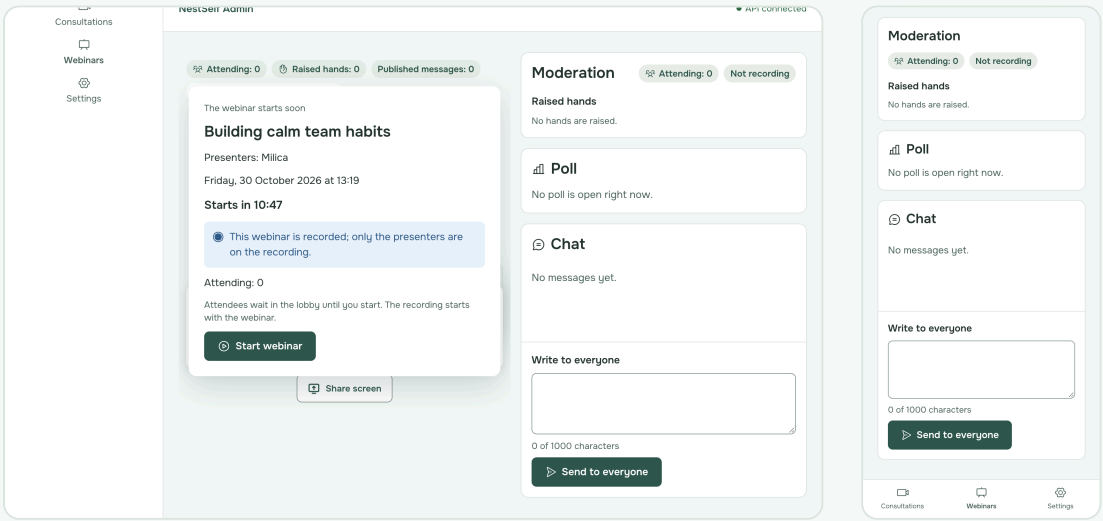

6.2

Running the webinar

The presenter view

Hosts open **Open the live view** up to 30 minutes before the start. “Check your setup” runs the device check with an optional **Test screen sharing** and shows “Registered attendees: N”, a number and never names. In the lobby, **Start webinar** starts the webinar: “Attendees wait in the lobby until you start. The recording starts with the webinar.”

The presenter sees **Attending: N**, **Raised hands: N** and **Published messages: N**, shares the screen with **Share screen**, and writes **Write to everyone** with **Send to everyone**; host messages appear at once. A presenter sees only published messages and, for raised hands, “A participant asked to speak” with a count.

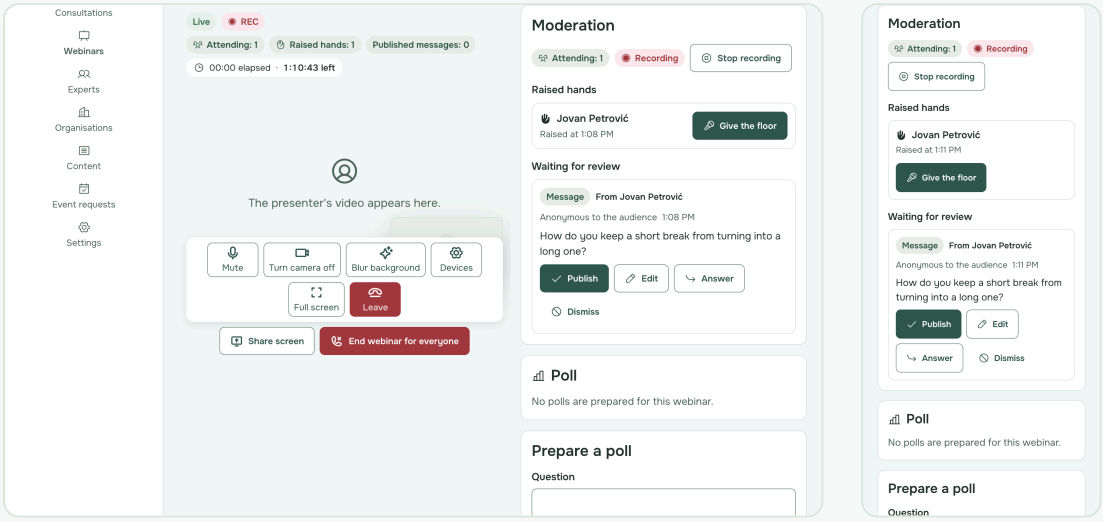

Expert as presenter · admin app The presenter's lobby with Start webinar. Screen 73, desktop and mobile

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

The moderator console

The **Moderation** panel shows the attendance count, the recording badge and **Stop recording**. Under **Raised hands** each hand shows the registered name, the time it was raised and **Give the floor**.

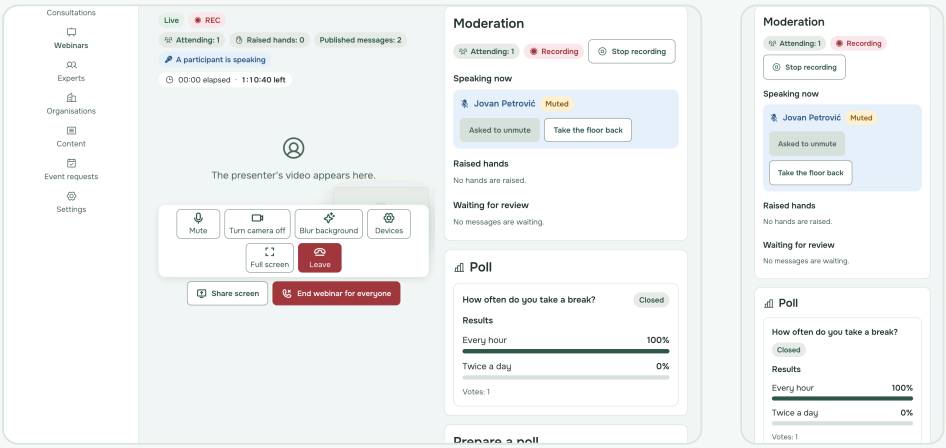

Waiting for review lists each message with its author and “Anonymous to the audience” or “First name shown”: **Publish**, **Edit** (then **Publish edited text**), **Answer** (then **Publish answer**) or **Dismiss**. A dismissed message never reaches the audience.

Operations, moderator · admin app The moderator console while live: a raised hand and a message to review. Screen 74, desktop and mobile

When an attendee has the floor

The attendee appears under **Speaking now**. You can **Mute** them; a muted speaker shows **Muted** and **Ask to unmute**, which sends the request and then reads **Asked to unmute**. Only the attendee can unmute. **Take the floor back** ends their turn and turns their microphone off.

Operations, moderator · admin app Speaking now: Mute, Ask to unmute and Take the floor back. Screen 77, desktop and mobile

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

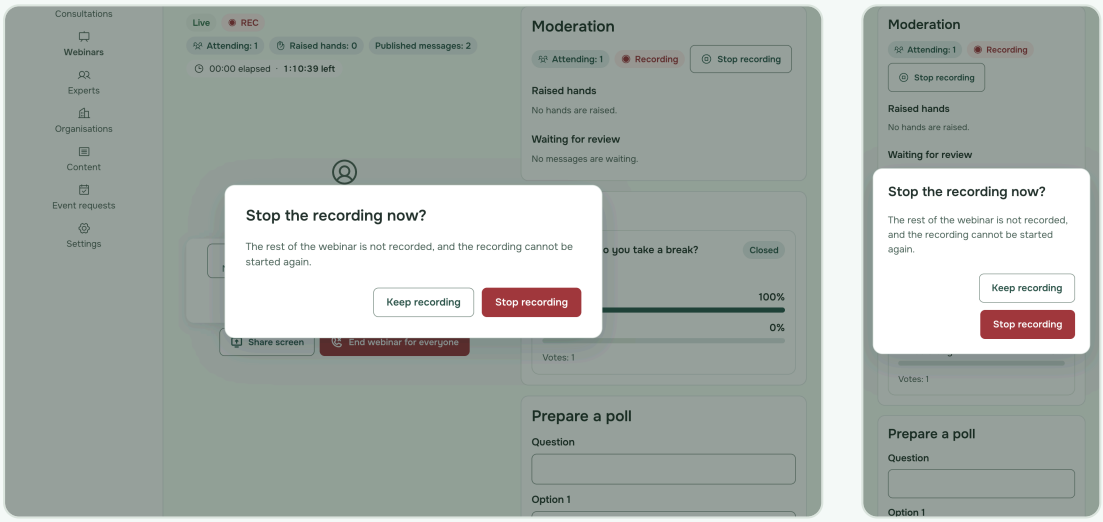

Polls and ending the webinar

Under **Prepare a poll**, write a question and two to six options and select **Add poll**: “Poll added. Open it when you are ready.” **Open poll** shows it to everyone; **Close poll** publishes the results without names.

End webinar for everyone asks “End this webinar?” “All attendees will be disconnected.” Choose **Keep the webinar going** or end it. Presenters and the moderator can both end the webinar; otherwise the room closes 15 minutes after the scheduled end.

Stopping the recording early

The recording starts by itself with the webinar, shows **REC** to everyone and stops when the webinar ends. Only the moderator can stop it earlier: “Stop the recording now?” “The rest of the webinar is not recorded, and the recording cannot be started again.” Choose **Keep recording** or **Stop recording**. If the recording fails, everyone sees “The recording failed. The webinar continues without a recording.”

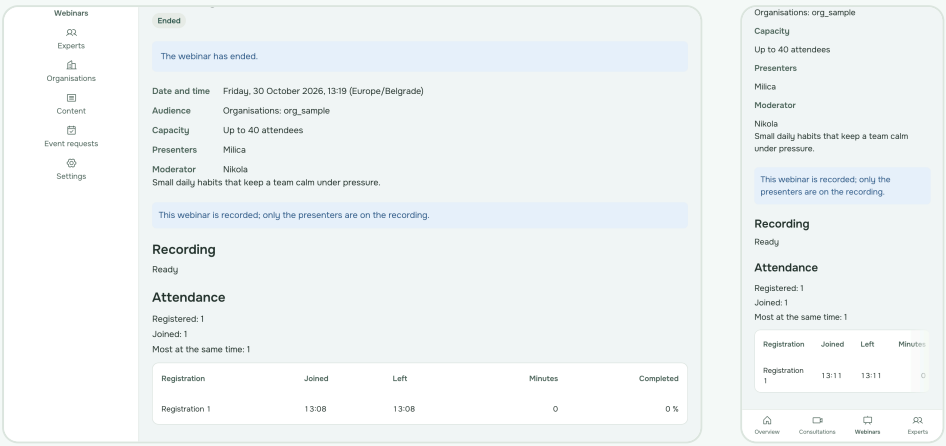

Operations, moderator · admin app The confirmation before the recording stops for good. Screen 75, desktop and mobile

Admin app. Signed in as the sample moderator, Nikola Đorđević, and the sample expert as presenter.

Attendance after the webinar

Once the webinar ran, its page shows **Attendance**: **Registered: N**, **Joined: N** and **Most at the same time: N**, then a table titled “Attendance per registration, without names”: one row per registration (**Registration N**) with **Joined**, **Left**, **Minutes** and **Completed**. Only moderators and NestSelf operations can open it, every view is recorded, and employers never receive it. The page also shows the **Recording** state.

Operations, moderator · admin app Attendance per registration, without names. Screen 79, desktop and mobile

Recording states on the webinar page

- **Starts with the webinar**: before the start.
- **Recording now**: while live.
- **Being processed**: the pieces are joined into one video file.
- **Ready**: the file exists, in Frankfurt, encrypted at rest.
- **Handed to the content team**: passed to the content team for review.
- **Failed**: no recording; the webinar went on without one.

What “handed off” means

The replay is never published straight from the meeting. The content team reviews it first and decides whether and when attendees can watch it. Today the hand-off is noted as pending: the content system's media interface does not exist yet, so the content team collects the file from its folder (see chapter 9).

Only presenters are on the recording: the video, the sound and the shared screen of the presenters, and the voice of an attendee who was given the floor and unmuted.

CHAPTER 7

Operations and support

Admin app. Operations, booking coordinators and support operators.

NestSelf operations book consultations for client companies and keep an overview; support operators look into technical problems from connection data, never from content. This edition has no screenshots of these screens.

Booking a consultation

Client operations open **Consultations** and select **New consultation**: “Book a consultation for an employee of an organisation you support, with an expert approved for the service.” Choose the **Organisation**, the **Employee**, the **Service** and the **Expert**, then the date, **Start time** and **End time**. Times are in Europe/Belgrade. Select **Book consultation**: “Consultation booked for DATE at HH:MM.”

The form refuses an expert who is not approved for the service (“This expert is not approved for this service.”) and an employee from another organisation (“This employee is not a member of the organisation.”). Reminders are scheduled at once.

The operations list

Consultations lists every consultation of the organisations you coordinate, with **Expert** and **Organisation** columns. **Filters**: **Organisation**, **Status**, **From** and **To**, with **Apply filters** and **Clear filters**. **View** opens a read-only page: “Operations view: read-only. Only the assigned expert joins the call or records the outcome.”

Canceling a consultation

Cancel appointment asks “Cancel this appointment?” and “DATE at HH:MM. Both participants are told, and it cannot be undone.” Choose **Keep appointment** or **Cancel appointment**. Only a confirmed appointment can be canceled. Both participants receive an email, and a call that is already running closes. The employee can cancel their own appointment; the expert cannot cancel.

Call support

Support operators open **Call support**: “Look up a call session to see its connection diagnostics. Every lookup is recorded.” Enter the **Session ID** and select **Look up**. The page shows the session's status, provider, start, end and meeting id, and for each participant the role, join and leave times, reconnections, connection quality, error codes, browser and operating system. It never shows names, content or device names.

Technical problem reports lists the reports employees and experts sent, with **Problem** and the connection summary; **Diagnostics** opens the session. Listing every report needs platform-wide access; otherwise: “Listing problem reports needs platform-wide diagnostics access. Look up a session by its ID above instead.”

Sample mode

When an app runs on sample data, every screen shows the banner “Sample data. Nothing here is real, saved or sent.” and no action sends or saves anything. The call and webinar screens can be tried with **Try the call screen with sample data**, which says “This is a demonstration with sample data. No call is started, and nothing is recorded or sent.”

Approvals in sample mode show fictional requests and say “Sample mode: these requests are fictional. Approving or declining sends nothing.” or, with nothing to show, “Sample mode: there is nothing to decide here and nothing is sent.” The policy screen says “Sample mode: your choice is not saved.”

Who can do what today

- Book and cancel consultations: client operations, for the organisations they coordinate.
- Create, publish, edit and cancel webinars: holders of webinar management (operations, content publishers).
- Moderate webinars: client operations and the platform owner.
- Look up call diagnostics: support operators.
- Service coordinators cannot yet moderate, book or cancel (chapter 9).

CHAPTER 8

Privacy and recording in one page

For everyone.

What is recorded, who is on it, how long things are kept and what is never stored. The employer's view is in section 2.11.

What is recorded

- Webinars: always, from start to end, unless the moderator stops it early.
- Consultations: never. There is no recording control.
- On a webinar recording: the presenters' video, sound and shared screen, and the voice of an attendee given the floor after they unmute. Attendees cannot send video, so no attendee is ever seen.
- The notice is shown at registration, in the email, in the lobby and before an attendee unmutes.

What is never stored

- Professional notes: the outcome form has no notes field.
- The content of a consultation: no recording, no chat.
- Join tokens: never written to the database or to logs.
- Quick signals such as “I cannot hear you”: gone when the session ends.
- Who voted for what in a poll.
- Names or device names in technical reports.

How long data is kept

- Appointments, sessions, outcomes and approval requests: 7 years.
- Connection diagnostics and technical reports: 90 days.
- Webinar messages and questions, polls: 12 months; then the link to the author is removed from messages.
- Feedback and webinar registrations: 24 months.
- Raw recording pieces: 30 days. The finished replay follows the content team's rules.
- A shared location: deleted when the session ends.

These are defaults until the data protection assessment confirms them.

Where it lives, and help in a crisis

Calls run on Amazon Chime SDK in the Frankfurt region (eu-central-1); recordings are stored there, encrypted at rest. The video service receives random ids, never names or email addresses.

The crisis block lists Serbian numbers only, because NestSelf launches in Serbia: emergency 112, ambulance 194, Centar Srce 0800 300 303. Hungarian numbers come with a Hungarian launch.

CHAPTER 9

Known limitations and what comes next

From the decision record, section 11, and the implementation notes, 25 October 2026.

The consultations and webinars described here are built and tested in the browser against the NestSelf API with a stand-in video service. These are the gaps that are known and accepted for now.

No measurement against AWS yet

The eight spikes have scripts and result templates but have not run in the dev account. Until they do, some behaviour rests on written assumptions: that the recording takes one meeting seat, that the recording shows the presenters only, and that a speaker in a large webinar keeps stable sound.

Certificates and the load test

Certificates of attendance and the load test before the first large webinar are not started. They belong to the first quarter after the pilot.

Phones and workshops

The mobile app does not open calls yet; on a phone, the employee uses the workspace app in the browser, without screen sharing. Small group workshops and replay captions come later. There are no live captions: the service does not support Serbian or Hungarian.

Service coordinators

Service coordinators cannot moderate webinars, book or cancel consultations until the founder decides how their access is scoped. Moderators today are client operations and the platform owner.

Replay hand-off

After a webinar, the hand-off to the content team is a pending note with the file's folder; the content system connects when its media interface exists. The email that tells presenters they were recorded is written but not sent. A presenter who joins after the recording started may be missing from it.

Expert photo and credentials

The waiting card shows the expert's first name and initial only; there is no source for the photo and credentials yet.

Webinar audience

There is no plan model yet, so “Every eligible organisation” reaches every active member of every active client organisation.

Hungarian hotlines

The crisis block lists Serbian numbers only.

Working days and holidays

Approval reminders and lapses count Monday to Friday in Belgrade time and do not know public holidays.

Support contact

The technical support address is a placeholder on a reserved domain until it is set for launch.

From the decision record, section 11, and the implementation notes, 25 October 2026.

What comes next

1. The founder runs the spikes in the dev account and records the results; any decision that waits on a spike then binds or changes.
2. Engineering takes the remaining tasks: certificates and the load test, then the mobile ticket route, workshops and replay captions, and the follow-ups listed in the implementation notes.
3. The data protection assessment and the legal checklist run alongside development and gate only the production launch.

Where the detail lives

- `02-decisions.md` section 11: the known limitations.
- `07-implementation-notes.md` : what was built, how to run it, the follow-ups.
- `04-user-stories.md` : every story with its acceptance criteria.
- `manual/screenshots/INDEX.md` : every screen with its route and state.
